

Figure S1 The relative expression of the 4 down-regulated tsRNAs of 5 PCH patients and 5 healthy volunteers. Two plasma samples were collected in each group. 1: centrifuged 1,000 g for 10 min; 2: centrifuged 5,000 g for 20 min. $p < 0.05$ was considered statistically significant.

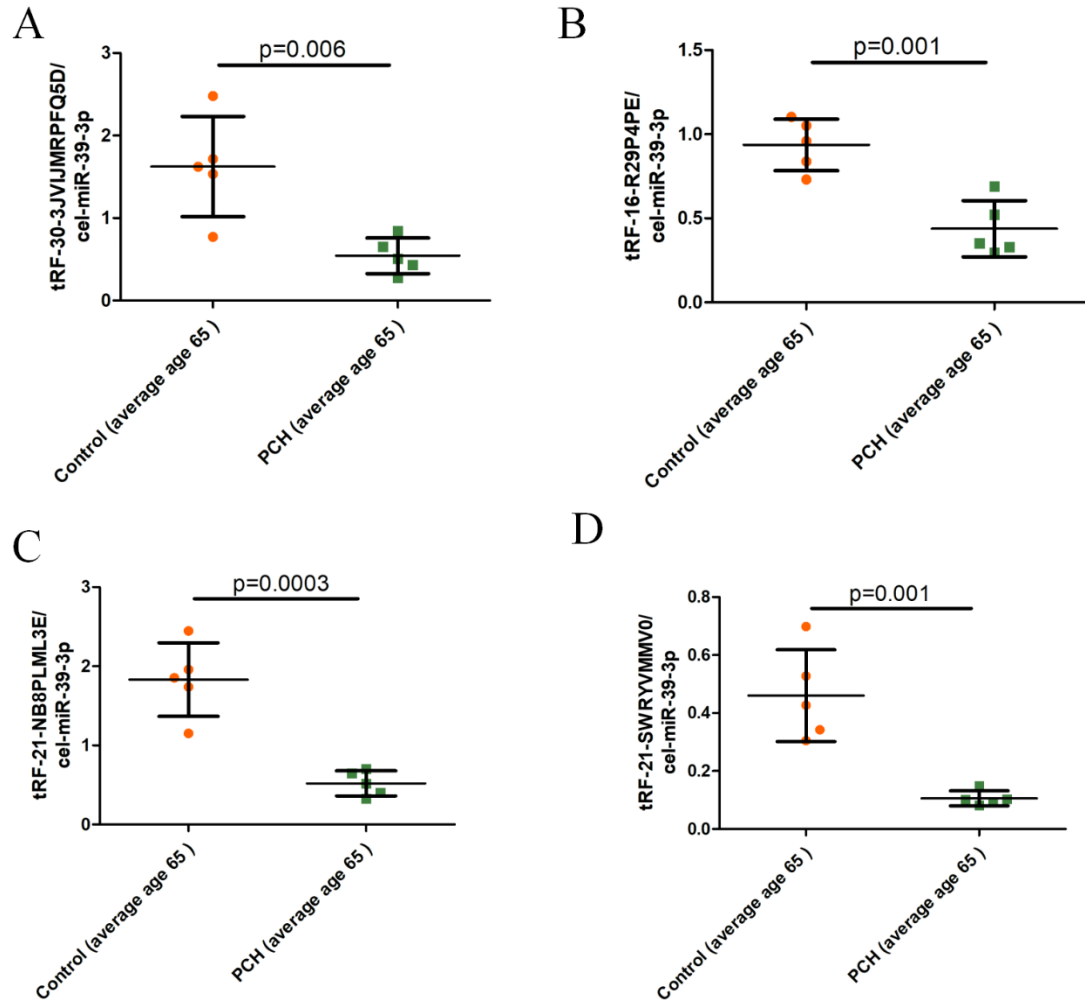

Figure S2 The relative expression of the 4 down-regulated tsRNAs of 5 PCH patients (with the average age 65) and 5 healthy volunteers (with the average age 65). $p<0.05$ was considered statistically significant.
