

Supplementary

Table S1 include all the websites from which media reports were analyzed. It should be noted that the media reports were identified through Google searches using specific keywords (see methodology). The searches were not conducted directly within the websites. The first 20 Google results of each search were downloaded into our database and analyzed. Three types of media sources appeared in our data, popular media sources, medical or government sources and academic sources.

Table S1: Website from which media reports were analyzed
