D-dose ID, C-control samples

**Figure S1.** Content of VFAs (g/L) in bioreactors containing antimicrobials and in the control bioreactor. C-control samples, D-dose ID, VFAs-volatile fatty acids. For example, "C/D 1.1" indicates samples C1.1 and D1.1 (green and blue points on the line graph, respectively).

**Figure S2.** The taxonomic distribution of microbial diversity and ARG abundance in all sequenced samples of sewage sludge. The links describe the Pearson correlation ( $>0.7$ ,  $p < 0.05$ ) between the abundance of ARGs and the relative abundance of the bacterial community on different taxonomic levels.
