As can be seen from the data obtained and shown in Table 5, the trees found in this stand do not have advanced ages, it is only possible to find a 21 years old tree, while the rest have younger ages, being one 6 years old tree, three 9 years old trees, two 10 years old trees, two 11 years old trees, one 12 years old tree, one 13 years old tree, two 14 years old trees, one 15 years old tree, one 16 years old tree and one 19 years old.

Table S3. Data obtained in the sampling operations and used to create the models.

Data for the characterization of *A. dealbata* stands, as previously mentioned in Section 2, were obtained by measuring, weighing, and counting the growth rings, in the case of age estimation. The data obtained for the height of the trunk (h_{trunk}) presented a minimum value of 5.8 m and a maximum value of 21.7 m, with an average value of 13.78±4.5 m. The canopy height (h_{canopy}) had a minimum value of 2.5 m and a maximum value of 11.0 m, with an average value of 4.0±2.4 m. The total height (h_{total}) presented a minimum value of 8.8 m and a maximum value of 32.7 m, with an average value of 18.19±6.3 m. The canopy diameter (d_{canopy}) had a minimum value of 1.0 m and a maximum value of 4.8 m, with an average value of 2.3±2.9 m. The diameter at breast height (DBH) had a minimum value of 4.2 cm and a maximum value of 30.7 cm, with a mean value of 9.95±7.2 cm. The weight of the trunk (W_{trunk}) presented a minimum value of 3.6 kg and a maximum value of 578.9 kg, with an average value of 48.75±142.5 kg. The weight of the branches (W_{branches_leaves}) presented a minimum value of 2.0 kg and a maximum value of 31.7 kg, with an average value of 4.75±9.2 kg. The total weight (W_{total}) presented a minimum value of 5.5 kg and a maximum value of 594.8 kg, with an average value of 51.2±149.1 kg. The age of the trees presented a minimum value of 5 years and a maximum value of 20 years, with an average value of 12.0±3.9 years.

Table S4. Cumulative data per year of growth for height and diameter.

Table S5. DBH of the 59 trees located in the two reference transects and the values obtained from the application of the equation generated according to the model of Petterson (1955) and from the application of the equation generated according to the model of Loetsch et al. (1973).

DBH	Petterson (1955) Model Predicted Values	Loetsch et al. (1973) Model Predicted Values	DBH	Petterson (1955) Model Predicted Values	Loetsch et al. (1973) Model Predicted Values
