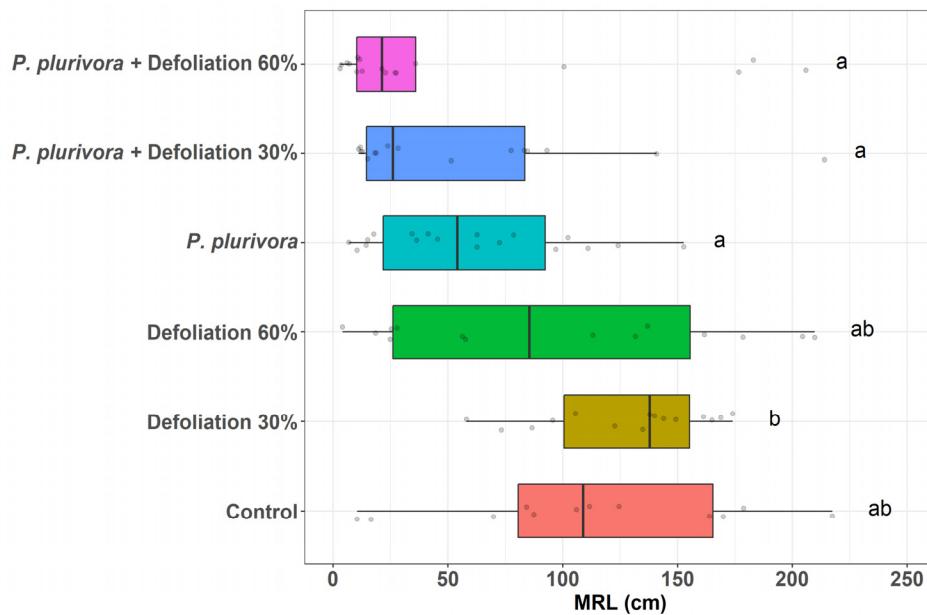

Figure S2. Root morphology parameters depending on the treatment: MRL -length of the mother roots 2–5 mm). The lower and upper hinges correspond to the first and third quartiles (the 25th and 75th percentiles) and the center line corresponds to the median. The upper whisker extends from the upper hinge to the largest value no further than 1.5 * IQR from the hinge (where IQR is the inter-quartile range, or distance between the first and third quartiles). Likewise, the lower whisker extends from the lower hinge to the smallest value no further than 1.5 * IQR from the hinge.

Table S5. Mother roots length sample statistics.

	Defoliation	Infected	Mean	SE	Q1	Median	Q3	IQR	Min	Max
