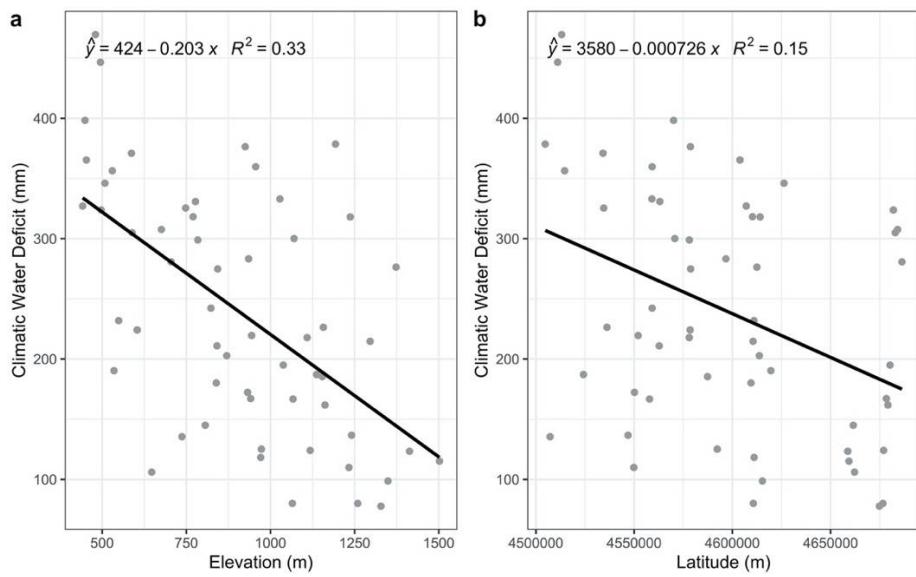

Figure S2. Elevation and latitude. Linear regressions of climatic water deficit (78–470 mm) of 57 plots in the Klamath study region for which site topographic variables of latitude (m) and elevation (m) have been assessed.

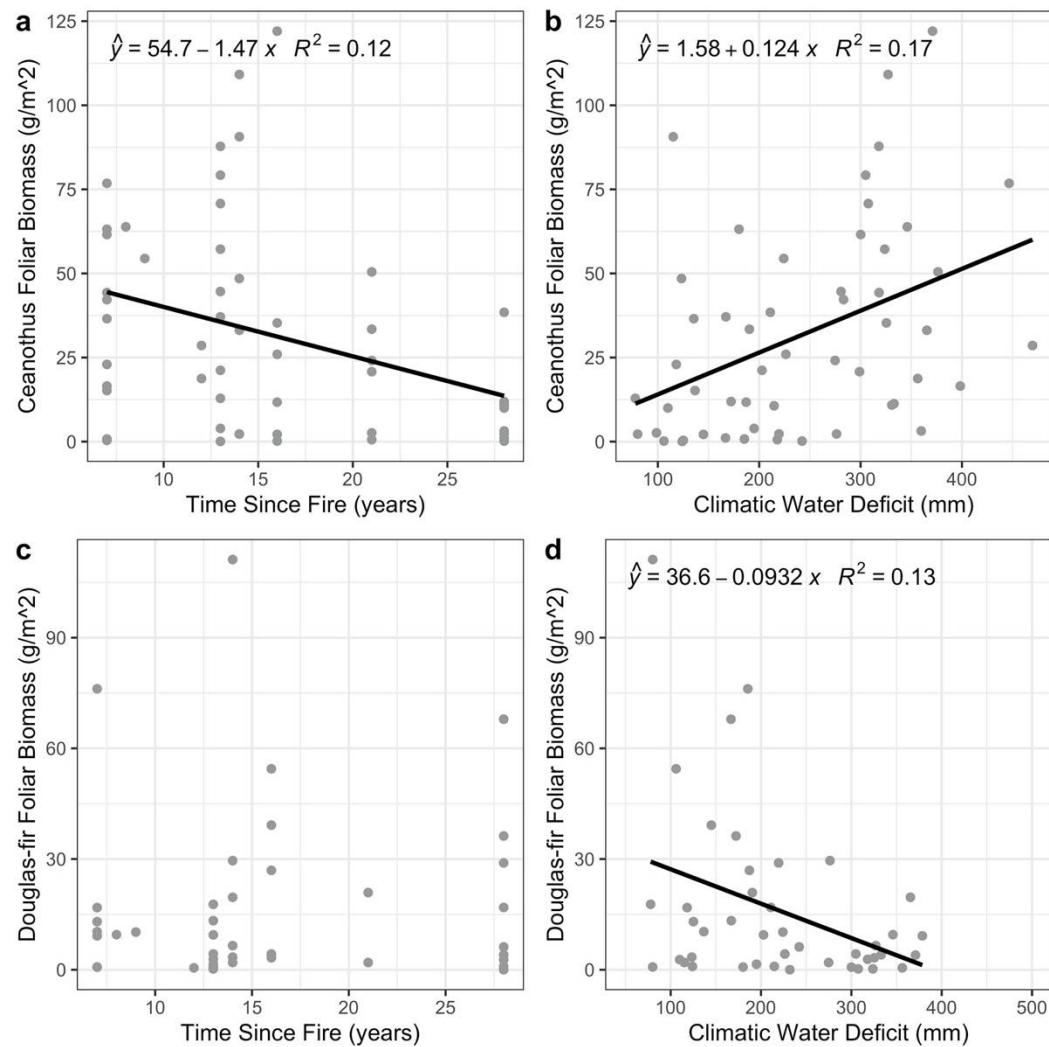

Figure S3. Foliar biomass regressions. Linear regressions of *Ceanothus* spp. and Douglas-fir foliar biomass with time since fire and climatic water deficit. Black regression lines demonstrate significant relationships ($p < 0.05$).
