

Table S1. The longitude, latitude and urbanization intensity of the 18 sample plots. RP1-RP6 represent rural plots, SP1-SP6 represent suburban plots, UP1-UP6 represent urban plots. R1, R2, R3 and R4 represent the urbanization intensity at 250 m, 1 km, 2 km and 5 km resolution, respectively.

	Plots	longitude	latitude	R1	R2	R3	R4
RP1	Heimi Park	113.005	28.4447	0	0	0.0048	0
RP2	Shiyan Hu Park	113.0802	28.016	0.0992	0	0	0.4336

Table S2. The relative abundance of soil bacterial communities at phylum (top10) and order (top19) ranks (%). RF, SF, UF, RG, SG and UG represent rural forestland, suburban forestland, urban forestland, rural grassland, suburban grassland and urban grassland, respectively. Significant differences ($p < 0.05$) among treatments are shown with different letters. The differences were tested using one-way analysis of variance (ANOVA) and followed by post-hoc Tukey Honestly Significant Difference (HSD) tests for significance.

Taxa	Forestland						Grassland					
	RF	SF	UF	RG	SG	UG	RF	SF	UF	RG	SG	UG
