Enhanced natural regeneration potential of sessile oak in Northern Hungary – role of artificially increased density of insectivorous birds

by Csaba Béla Eötvös, Ágnes Fürjes-Mikó, Márton Paulin, Csaba Gáspár, Marcell Kárpáti, Anikó Hirka and György Csóka

Table S3. Estimated caterpillar consumption of bird species

Species	Average number of visits per hour	Average day length during breeding (hours)	Average length of breeding (days)	Average number of prey per visit	The percentage of visits when caterpillars are brought to the nestlings	SE	Caterpillar consumption per brood	SE	References
<i>Parus major</i>	22.6	15	20	1	61.50%	3.10%	4170	210	[1]
<i>Cyanistes caeruleus</i>	50.9	15	20	1	48.30%	13.50%	7375	2061	[1]
<i>Ficedula albicollis</i>	24	15.5	16	1.8	53.60%	NA	5742	NA	[2,3]
<i>Sitta europaea</i>	19.2	14	21	1	54.20%	5.90%	3059	333	[4,5]
