This PDF file includes:

Figure S1. The fishing effort and number of fishing vessels during 2012-2020.

Figure S2. The spatial distribution of MPA and EEZ locations.

Figure S3. The spatial distribution of commercial fishery data during 2015-2020

Figure S4. The average importance scores for different MaxEnt models

Figure S5. Jackknife test results of the variable importance derived for each month in the GFW_0.25° model. The blue and green bars correspond to the effect on model gained by using and sequentially removing each variable from the model, respectively.

Figure S6. Jackknife test results of the variable importance derived for each month in the GFW_0.5° model. The blue and green bars correspond to the effect on model gained by using and sequentially removing each variable from the model, respectively.

Figure S7. Jackknife test results of the variable importance derived for each month in the GFW_1° model. The blue and green bars correspond to the effect on model gained by using and sequentially removing each variable from the model, respectively.

Figure S8. Jackknife test results of variable importance derived for each month in the WPCFC model. The blue and green bars correspond to the effect on model gained by using and sequentially removing each variable from the model, respectively.

Figure S9. Response curves for important variables in all months in the GFW_0.25° model.

Figure S10. Response curves for important variables in all months in the GFW_0.5° model.

Figure S11. Response curves for important variables in all months in the GFW_1° model.

Figure S12. Response curves for important variables in all month in the WPCFC model.

Figure S13. Frequency distribution of important variables based on EF data at the 0.25° spatial scale

Figure S14. Frequency distribution of important variables based on EF data at the 0.5° spatial scale

Figure S15. Frequency distribution of important variables based on EF data at the 1° spatial scale

Figure S16. Frequency distribution of important variables based on commercial fishery data at the 1° spatial scale

Figure S17. The spatial distribution of fishing locations (black dots) overlain on habitat suitability maps for each month during 2015-2019 in the GFW_0.25° model.

Figure S18. The spatial distribution of fishing locations (black dots) overlain on habitat suitability maps for each month in 2020 in the GFW_0.25° model.

Figure S19. The spatial distribution of fishing locations (black dots) overlain on habitat suitability maps for each month during 2015-2019 in the GFW_0.5° model.

Figure S20. The spatial distribution of fishing locations (black dots) overlain on habitat suitability maps for each month in 2020 in the GFW_0.5° model.

Figure S21. The spatial distribution of fishing locations (black dots) overlain on habitat suitability maps for each month during 2015-2019 in the GFW_1° model.

Figure S22. The spatial distribution of fishing data locations (black dots) overlain on habitat suitability maps for each month in 2020 in the GFW_1° model.

Figure S23. The spatial distribution of fishery data locations (black dots) overlain on habitat suitability maps for each month during 2015-2019 based on fishery data.

Figure S24. The spatial distribution of fishery locations (black dots) overlain on habitat suitability maps for each month in 2020 based on fishery data.

Figure S25. The spatial distribution of sample data in the GFW_0.25° model based on FE data. Red dots show the presence locations used for training, while violet dots show test locations.

Figure S26. The spatial distribution of sample data in the GFW_0.5° model based on FE data. Red dots show the presence locations used for training, while violet dots show test locations.

Figure S27. The spatial distribution of sample data in the GFW_1° model based on FE data. Red dots show the presence locations used for training, while violet dots show test locations.

Figure S28. The spatial distribution of sample data in the GFW_1° model based on fishery data. Red dots show the presence locations used for training, while violet dots show test locations..

Table S1. Summary of environmental data and description.

Abbreviation	Variable explained	Unit	Spatial resolution
SST	Sea surface temperature	degrees_C	0.083° × 0.083°
SSH	Sea surface height	m	0.083° × 0.083°
SSS	Sea surface salinity	1e ⁻³	0.083° × 0.083°
Mld	Mixed layer depth	m	0.083° × 0.083°
U	Geostrophic zonal velocity	m/s	0.083° × 0.083°
V	Geostrophic meridional velocity	m/s	0.083° × 0.083°
Dox	Dissolved oxygen	mmol·m ⁻³	0.25° × 0.25°
PP	Total Primary Production	mg·m ⁻³ ·day ⁻¹	0.25° × 0.25°
Chl	Sea surface total Chlorophyll	mg·m ⁻³	0.25° × 0.25°
T100	The temperature at 92.33 metres	degrees_C	0.083° × 0.083°
S100	The salinity at 92.33 metres	1e ⁻³	0.083° × 0.083°
O100	The oxygen concentration at 97.04 metres	mmol·m ⁻³	0.25° × 0.25°
PP100	Total Primary Production 97.04 metres	mg·m ⁻³	0.25° × 0.25°
Chl100	The total Chlorophyll at 97.04 metres	mg·m ⁻³	0.25° × 0.25°
T200	The temperature at 186.12 metres	degrees_C	0.083° × 0.083°
S200	The salinity at 186.12 metres	1e ⁻³	0.083° × 0.083°
O200	The oxygen concentration at 199.79 metres	mmol·m ⁻³	0.25° × 0.25°
PP200	Total Primary Production at 199.79 metres	mg·m ⁻³	0.25° × 0.25°
chl200	The total Chlorophyll at 199.79 metres	mg·m ⁻³	0.25° × 0.25°
Depth	Bathymetry	m	0.083° × 0.083°
DSH	Distance to nearest shore	km	0.01° × 0.01°
DPT	Distance to nearest port	km	0.01° × 0.01°
