

Table S1. Means and SEMs of the contents of minerals and metabolites in grains of individual genotypes of the three cereal types grown in four environments.

Some variables required transformation, square root (Sqrt) or \log_e (log) to meet the assumptions of the analysis.

Table S6. p values from ANOVA of AXOS and GOS in the three types and genotypes of wheat.

Statistically significant values ($p < 0.05$) are highlighted.

Some variables required transformation, square root (Sqrt) or \log_e (log) to meet the assumptions of the analysis.
