Exploring the Bioactive Content of Liquid Waste and Byproducts Produced by Two-Phase Olive Mills in Laconia (Greece): Is There a Prospect for Added-Value Applications?

Figure S1. Olive mills with two-phase decanter (A-E) and EASL location in Laconia region.

Table S1. Residual moisture content of leaves and olive pomace (2021-2022, 2022-2023 harvest periods) dried at 70 and/or 140 °C

A-E: mills with two-phase decanters,

*Values (A-E) are means of 6 samplings within a 4 month period of operation analyzed in triplicate ($n=6 \times 3$) ± SD. Values in the same column with different superscripts differ significantly ($p \leq 0.05$).

** collected at 2021-2022 harvest period
