**B**

**Supplementary Figure S11.** Alignment and modeling of TvTUB $\alpha$ 1 and TvTUB $\beta$ 2 identified by LC-ESI-MS. **A)** Peptides identified of the TvTUB $\alpha$ 1 are shaded in brown and for TvTUB $\beta$ 2 are shaded in blue. The aa box are putative antigen regions common among the two proteins. The top number

indicates the overall prediction for the antigen (threshold for this model is 0.5, VaxiJen v2.0). **B)** Comparison of 3D structure of the T<sub>v</sub>TUB $\alpha$ 1 (brown) and T<sub>v</sub>TUB $\beta$ 2 (blue). The overlapping of T<sub>v</sub>TUB $\alpha$ 1 against T<sub>v</sub>TUB $\beta$ 2 structures was made in PDB Pairwise Structure Alignment (<https://www.rcsb.org/alignment>). TM-score: 0.95, SI%: 43 and SS%: 62. **TM-score**, template modeling score. It is a measure of topological similarity between the template and 3D model structures. The TM-score ranges between 0 and 1, where 1 indicates a perfect match and 0 is no match between the two structures. **SI%** (sequence identity percentage) is the percent of paired residues in the alignment that are identical in sequence. **SS%** (sequence similarity percentage) is the percent of paired residues in the alignment that are similar in sequence (Xu and Zhang, 2010).

\* Represents identical nucleotides.
