

Figure S3: The proportion of phenotypically resistant pigs in the Finisher herd in a gene-editing scenario of digenic sIAV resistance with 1 and 0.5 selection accuracy. Changing of selection accuracy did not affect the dissemination of alleles. MI = Microinjection. EP = Electroporation. AAVi = AAV *in vivo*. AAVex = AAV *ex vivo*. Alleles were inherited in a completely linked or independent manner. A) 100% mosaicism. B) 50% mosaicism. C) 20% mosaicism.
