

AUTOPHAGY-RELATED GENES IN CANCERS

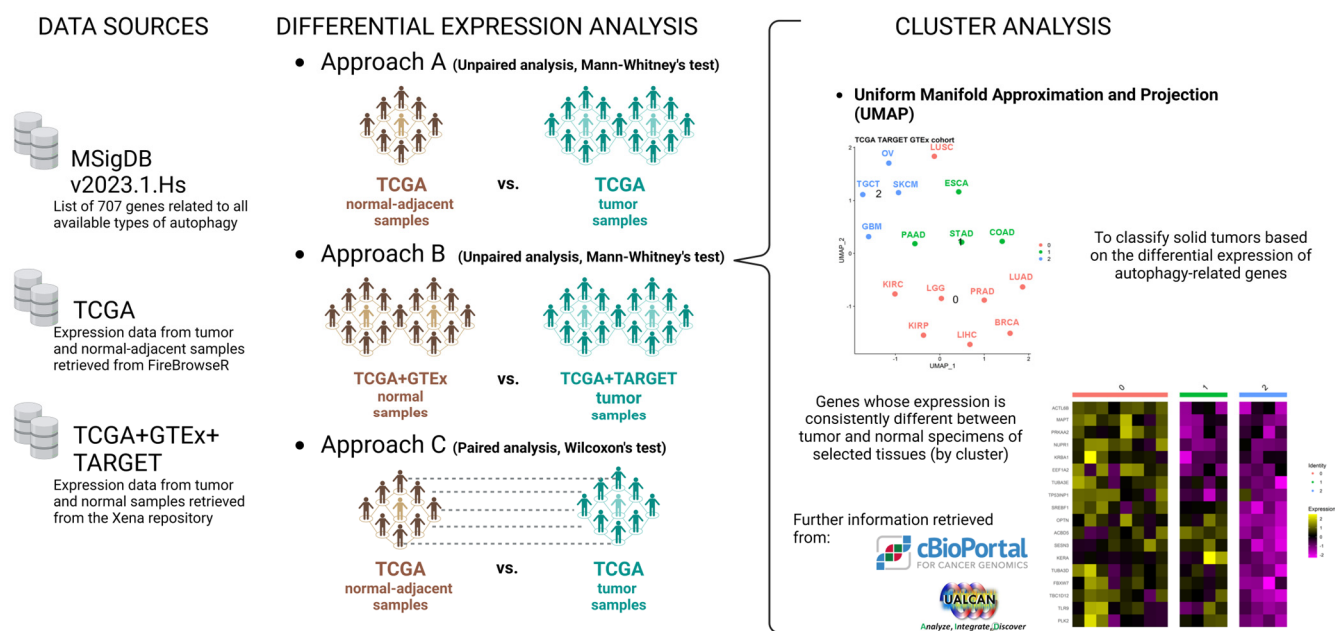

Figure S1: workflow used in this study.

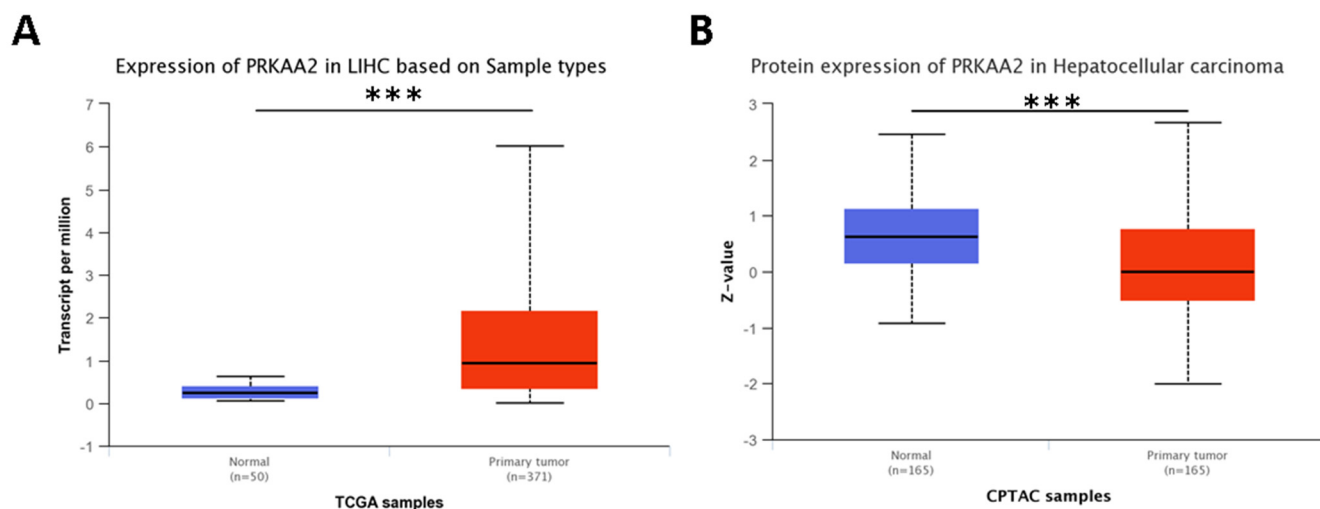

Figure S2: *PRKKA2* is an autophagy-related gene with divergences in its transcript and proteomic levels in LIHC. We evaluated transcriptomic (A) and proteomic (B) levels of the *PRKKA2* gene in the LIHC dataset. Results are contrasting. *** represents comparisons with p value < 0.001 on Welch's t -test.

Figure S3: accuracy (left) and Gini (right) contributions of genes relative to the clusters 0 + 1 vs. 2.
