Supplementary Figure S1: Integrated haplotype scores in LRRK2 c.6055G (rs34637584_A**) samples, with and without inflammatory risk markers**

Absolute value of standardized integrated haplotype scores across chromosome 12 for: A) homozygous wildtype individuals with, and B) without alleles for known inflammatory risk markers within the *LRRK2* locus. A small cluster of elevated iHS values can be observed in the group where risk alleles remain, but the signal is lost when they are removed.
