Table S1. Definitions of competing resource variables.	2-12
Table S2. Multivariate logistic regression analysis results with coefficients (Coef), standard errors (SE), and p-values (p) for the three models: (a) patient characteristics and competing resource utilization; (b) patient characteristics only; and (c) competing resource utilization only.	13-16
Table S3. Binary representation of competing resources indicating the usage of different combinations of resources (0=not used; 1=used) along with the count of cases where the outcome resource is used and not used.	17-19
Table S4. Patient characteristics for the top and bottom five patient visits where predicted resource usage probabilities and actual resource utilization are not aligned.	20-23
Table S5. Examples of the top and bottom 5 facilities, among those with at least 30 patients, based on the percentage of mis- (left), over- (middle), and under- (right) utilization of resources along with the count of patients in each facility receiving the outcome imaging resource.	24
Table S6. Logistic regression results for the association between misutilization by patient-visit (binary) and ICD class.	25
Table S7. Odds ratios, corresponding 95% CIs, and p-values for the association between misutilization and ICD class.	26
Table S8. Logistic regression results for the association between misutilization and age groups.	27
Table S9. Odds ratios, corresponding 95% CIs, and p-values for the association between misutilization and age groups.	28
Table S10. Logistic regression results for the associations between over- and under-utilization with payor type.	29
Table S11. Odds ratios, corresponding 95% CIs, and p-values for the association between over- and under-utilization with payor type.	30
Figure S1. Network analysis for associations (using tetrachoric correlations) among all competing resources and the response resource.	31
Figure S2. Network analysis for associations (using tetrachoric correlations) of resources for patient visits with the utilization of at least one competing resource.	32
Figure S3. Decision tree analysis to isolate different patterns in resource utilization by demonstrating the value of information of competing resources with the response resource.	33
