Supplementary Table S3. Quality assessment of the included papers (n=8).

Author, year	Class	Quality rating (Negative , neutral or positive)	Was the research question clearly stated?	Was the selection of study subjects/ patients free from bias?	Were study groups comparable ?	Was method of handling withdrawals described?	Was blinding used to prevent introduction of bias?	Were intervention/ therapeutic regimes/ exposure factor or procedure and any comparison(s) described in detail? Were intervening factors described?	Were outcomes clearly defined and the measurements valid and reliable?	Was the statistical analysis appropriate for the study design and type of outcome indicators?	Are conclusions supported by results with biases and limitations taken into consideration?	Is bias due to study's funding or sponsorship unlikely?
