

Figure S1. Effects of Kumazasa extract on cell proliferation in HaCaT cells. HaCaT cells were plated and incubated for 24 h or 72 h after the addition of Kumazasa extract (1000 µg/mL). Cell proliferation was analyzed by the WST-1 assay. The mean value of the control cells is expressed as 100% (mean ± SD, n=6, *: $p < 0.05$, **: $p < 0.01$ vs control cells)
