**Figure S1.** Cytoprotective activity of AAM in 3T3 (A) and HaCaT (B) cell lines for 1 mM H<sub>2</sub>O<sub>2</sub> during 2.5 h by MTT assay and expressed as percentage of cell viability respect to untreated cells. H<sub>2</sub>O<sub>2</sub> cell viability was used as positive control. Results are expressed as mean  $\pm$  standard error of  $n = 3$  (3T3) and  $n = 3$  (HaCaT). A two-way analysis of variance (ANOVA) and a Bonferroni *post hoc* assay have been performed. Statistical differences were considered as follows: \*\*\*\* $p \leq 0.0001$  comparison with positive control.
