* NRP, nonribosomal peptide

- a. Although two gene clusters are encoded, they were considered as a hybrid PKS/NRPS gene cluster. Consequently, the presence of mirubactin-biosynthetic gene cluster will not be noticed.
- b. As hopene-biosynthetic gene cluster is encoded near *nrps-4*, hopene/Terpen was indicated as the Most similar known cluster although an NRPS gene cluster is present.
- c. Although *pks/nrps-1* is a hybrid PKS/NRPS gene cluster, the biosynthetic gene cluster of xiamycin A, which is a terpene compound, was shown with a high similarity.
- d. Even though *pks/nrps-2* is a hybrid PKS/NRPS gene cluster, the biosynthetic gene cluster of auroramycin, which is not a hybrid polyketide/nonribosomal peptide but a polyketide compound, was searched.
- e. Germicidin is not 'Other' but 'Polyketide'.
- f. Two independent gene cluster are at least encoded in this region although they are considered as a hybrid gene cluster by antiSMASH.

Table S2. Most similar known cluster searched by antiSMASH for the gene clusters in *S. olivaceus* DC10-5.

Footnotes are the same in Table S1.

g. Although this region was considered as a hybrid PKS/NRPS gene cluster by antiSMASH, two independent gene cluster are present.

h. Although ishigamide- biosynthetic gene cluster encodes NRPSs and PKSs, *nrps-8* does not encode any PKSs.

Abbreviations of domains are as follows: A, adenylation; A_{xxx}, adenylation domain incorporating the amino acid shown in subscript three code letter; ACP, acyl carrier protein; AT, acyltransferase; AT_{em}, AT incorporating ethylmalonyl-CoA; AT_m, AT incorporating malonyl-CoA; AT_{mm}, AT incorporating methylmalonyl-CoA; C, condensation; CoL, CoA ligase; DH, dehydratase; E, epimerase; ER, enoyl reductase; KS, ketoacylsynthase; KR, ketoreductase; MT, methyltransferase; PCP, peptidyl carrier protein; TD, termination; TE, thioesterase.

- a. ORFs are indicated by locus tags. Domain organizations were predicted by antiSMASH.
- b. Not orphan but biosynthetic enzyme whose products were elucidated are shown by the name, locus tag or accession number. Domain organizations predicted by antiSMASH are indicated.
- c. product of the closest biosynthetic gene cluster
- d. I/P, identities/positives in amino acid sequences.
- e. ABB88519
- f. ABB88520
- g. ABB88522
- h. ABB88523
- i. -, N/A (no close enzyme with high sequence similarity)
- j. SRIM_RS28565
- k. SRIM_RS28570
- l. flaviolin and 1,3,6,8-tetrahydroxynaphthalene
- m. CCA62437
