

Covid-HIV ROUND 2

General questions

INTRODUCTION

As the Covid-19 containment measures ramp up around the world, different countries implement different strategies, and health systems are overwhelmed to varying degrees. Generating high-quality evidence on the impact of Covid-19 and related measures on both the quality of life and the management of HIV in different settings will help provide guidance for decision-making and better preparedness in case of future pandemics. In this light, researchers based at the University of Antwerp (Belgium) have designed a small study in collaboration with Sensoa and EATG to investigate the impact of the Covid-19 pandemic on HIV care and the well-being of persons living with HIV (PLHIV).

We kindly ask PLHIV to voluntarily fill this brief survey (about 10 minutes). The requested information is totally anonymous, and your answers will contribute to a better understanding how PLHIV are affected by the ongoing Covid-19 outbreak.
