

Supplementary material

Short-Term Effect of Temperature Change on Non-Accidental Mortality in Shenzhen, China

Yao Xiao, Chengzhen Meng, Suli Huang, Yanran Duan, Gang Liu, Shuyuan Yu,
Ji Peng, Jinquan Cheng, Ping Yin

List of Tables and Figures

Table S1 Quasi-Akaike information criterion (Q-AIC) values for DTR-model.

Table S2 Quasi-Akaike information criterion (Q-AIC) values for TCN-model.

Table S3 Spearman's correlation coefficients among different air pollutant concentrations and meteorological factors in Shenzhen from 2013 to 2017.

Table S4 Relative risk (95% *CI*) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods by varying modeling choices.

Table S5 Relative risk (95% *CI*) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods with adjustment for the TCN variable.

Table S6 Relative risk (95% *CI*) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods with adjustment for co-pollutants.

Table S7 Relative risk (95% *CI*) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods with adjustment for apparent temperature.

Table S8 Relative risk (95% *CI*) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods with adjustment for lag periods.

Table S9 Relative risk (95% *CI*) of non-accidental mortality for extreme high TCN at single-day and cumulative lag periods by varying modeling choices.

Table S10 Relative risk (95% *CI*) of non-accidental mortality for extreme high TCN at single-day and cumulative lag periods with adjustment for the DTR variable.

Table S11 Relative risk (95% *CI*) of non-accidental mortality for extreme high TCN at single-day and cumulative lag periods with adjustment for co-pollutants.

Table S12 Relative risk (95% *CI*) of non-accidental mortality for extreme high TCN at single-day and cumulative lag periods with adjustment for apparent temperature.

Figure S1. Exposure–response relationship between temperature change and risk of non-accidental mortality. Left panels: 3D plots of the exposure–lag-response risks. Right panels: overall exposure–response associations with diurnal temperature change (DTR) and temperature change between neighboring days (TCN).

Figure S2. Bivariate response surface of apparent temperature and temperature change on non-accidental mortality (Left: lag 0–5 for DTR and lag 0 for AT; right: lag 0–5 for TCN and lag 0 for AT).

Table S1. Quasi-Akaike information criterion (Q-AIC)^a values for DTR-model.

df for DTR	df for DTR lag				
	2	3	4	5	6
2	11664.12	11668.21	11669.57	11671.65	11670.98
3	11668.56	11674.90	11677.82	11681.42	11683.41
4	11664.46	11672.75	11676.73	11682.40	11685.56
5	11668.38	11677.94	11684.11	11688.37	11694.21
6	11671.60	11683.56	11690.40	11696.14	11703.76

^a Quasi Akaike Information Criterion, Q-AIC; its corresponding formula is as follows:
Q-AIC = -2(maximum log-likelihood) + 2df* $\hat{\varphi}$, where $\hat{\varphi}$ is the estimated overdispersion parameter.

Table S2. Quasi-Akaike information criterion (Q-AIC) ^a values for TCN-model.

df for TCN	df for TCN lag				
	2	3	4	5	6
2	11617.30	11622.66	11626.89	11631.45	11633.25
3	11620.33	11625.39	11631.84	11638.71	11642.95
4	11623.62	11631.03	11639.00	11647.64	11654.21
5	11626.04	11627.95	11635.78	11646.73	11655.07
6	11618.19	11619.53	11629.69	11642.78	11652.39

^a Quasi Akaike Information Criterion, Q-AIC; its corresponding formula is as follows:
Q-AIC = -2(maximum log-likelihood) + 2df* $\hat{\varphi}$, where $\hat{\varphi}$ is the estimated overdispersion parameter

Table S3. Spearman's correlation coefficients among different air pollutant concentrations and meteorological factors in Shenzhen from 2013 to 2017.

	Apparent temperature	DTR	TCN	CO	NO ₂	SO ₂	PM ₁₀	PM _{2.5}	O ₃
Apparent temperature	1.00	-0.09*	0.07*	-0.44*	-0.34*	-0.14*	-0.48*	-0.56*	-0.07*
DTR		1.00	0.33*	0.11*	0.27*	0.42*	0.36*	0.31*	0.21*
TCN			1.00	-0.01	0.22*	0.21*	0.18*	0.14*	0.01
CO				1.00	0.55*	0.30*	0.51*	0.54*	-0.17*
NO ₂					1.00	0.56*	0.60*	0.59*	-0.21*
SO ₂						1.00	0.63*	0.57*	0.06*
PM ₁₀							1.00	0.96*	0.33*
PM _{2.5}								1.00	0.33*
O ₃									1.00

Abbreviations: DTR, diurnal temperature change; TCN, temperature change between neighboring days; CO, carbon monoxide; NO₂, nitrogen dioxide; SO₂, sulfur dioxide; PM₁₀, particulate matter less than 10μm in aerodynamic diameter; PM_{2.5}, particulate matter less than 2.5μm in aerodynamic diameter; O₃, ozone.

* $p < 0.01$.

Table S4. Relative risk (95% CI) of non-accidental mortality for extreme high DTR at single-day and cumulative lag periods by varying modeling choices.
