

Figure S1. Different B and T-cell responses against the vaccine. A. B cell population (cells per mm³) versus days, B. lymphocytes B and deriving antibody-producing plasma cells (cells per mm³) versus days, C. B-cell population per state (cells per mm³) versus days, D. T-helper cell population (cells per mm³) versus days, E. T-helper cell population per state (cells per mm³) versus days and F. Different T-cell types cells per mm³ and percentage) versus time.

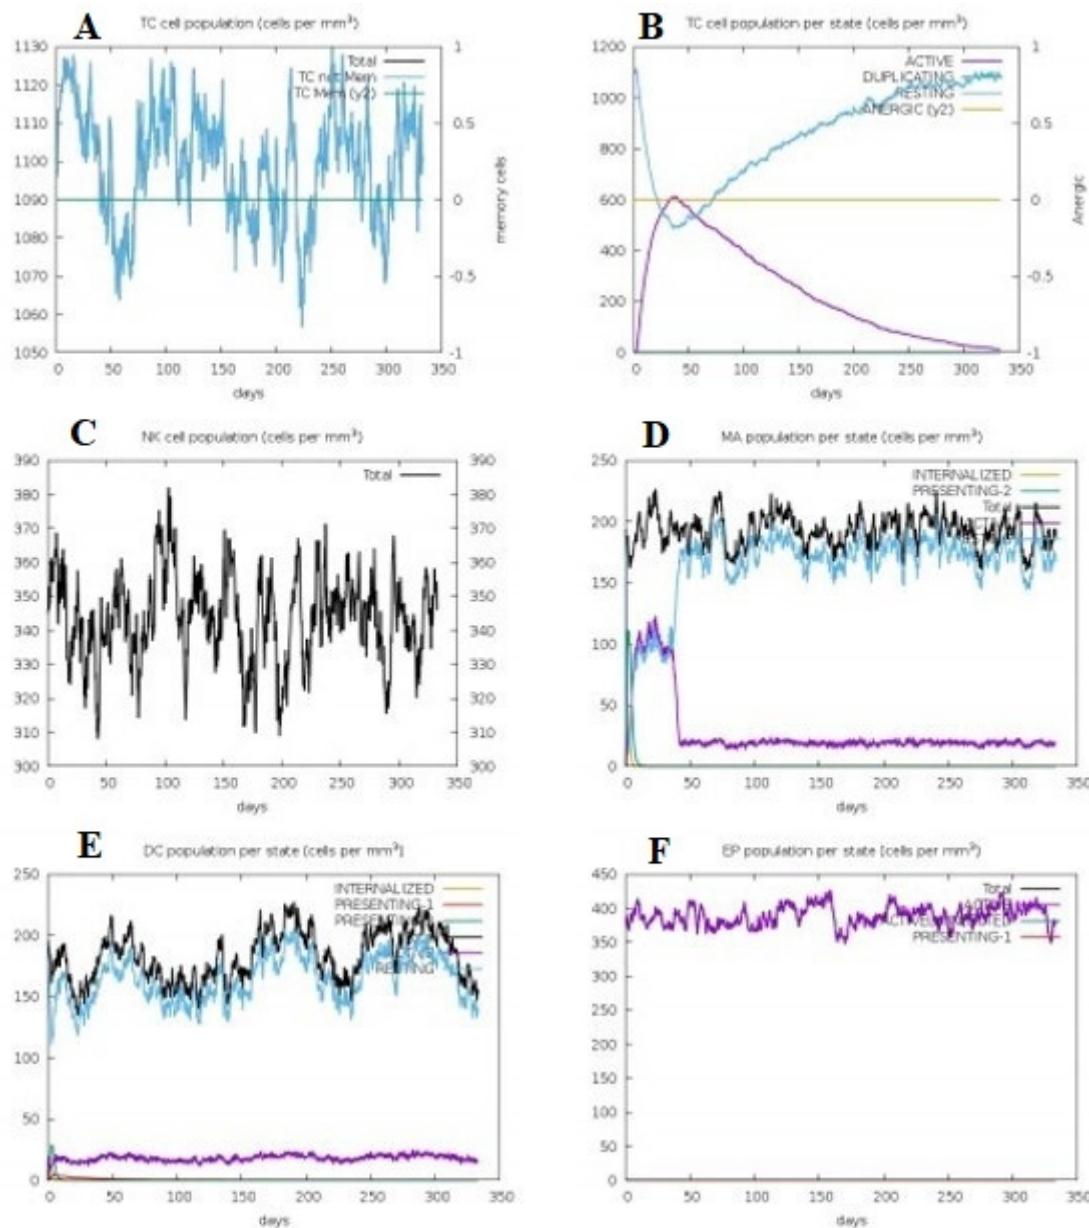

Figure S2. Different immune cell responses generated in response to the chimeric vaccine construct. A. Tc (cytotoxic killer T-cell) population (cells per mm^3) versus days, B. Tc (cytotoxic killer T-cell) population per state (cells per mm^3) versus days, C. NK (natural killer cell) population (cells per mm^3) versus days, macrophages, D. MA (macrophages cell) population per state (cells per mm^3) versus days, E. DC (dendritic cell) population per state (cells per mm^3) versus days, F. EP (epithelial cell) population per state (cells per mm^3) versus days.

Table S1. Antigenic exo-proteome, secretome and periplasmic proteins. Only proteins with cut-off value ≥ 0.5 were selected as antigenic and presented in the table.

Table S3. MHC-I and MHC-II epitopes predicted from B-cell epitopes. A percentile rank is the result of comparing given peptide's predicted binding affinity against set of similarly sized peptides selected randomly from the SWISS-PROT database. All the presented epitopes have lowest percentile score for a given B-cell epitope (cut-off < 100). Epitopes that are common in MHC-I and MHC-II were selected for further processing. .

Table S4. Refinement models of loop model vaccine structure. The model selectin was based on overall lowest GDT-HA (global distance test - high accuracy) score, lowest RMSD (root mean square deviation) score, lowest MolProbity score, lowest clash score, less number of poor rotamers value, and highest number of residues in Ramachandran favored regions of the Ramachandran plot. For each parameter, there is not specific threshold value.

Model	GDT-HA (global distance test - high accuracy)	RMSD (root mean square deviation)	MolProbity	Clash score	Poor rotamers	Rama favored
Initial	1.0000	0.000	3.577	77.8	5.0	83.5
MODEL 1	0.9382	0.438	2.044	10.4	0.4	91.3
MODEL 2	0.9404	0.432	2.143	10.8	1.2	90.2
MODEL 3	0.9382	0.439	2.141	11.2	1.2	90.8
MODEL 4	0.9425	0.419	2.062	10.4	0.4	90.8
MODEL 5	0.9361	0.430	2.153	13.4	0.8	91.0

Table S5. Docking score of top 20 complexes of designed vaccine construct to MHC-I/MHC-II/TLR-4 generated by PATCHDOCK server. The complexes are ranked on PATCHDOCK score. Higher score implies best docked complex and vice versa. Energy is presented in kJ.mol-1 (lower energy solution is often regarded as best docked complex). ACE stands for atomic energy contact.

MHC-I
