12.	cardiovascular system diseases										
13.	neoplasms										
14.	psychiatric diseases										
15.	respiratory system diseases										
16.	genitourinary system diseases										
17.	spine and motor system diseases										
18.	stomatognatic system diseases										
19.	metabolic diseases										
20.	digestive system diseases										

	Copying with	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
21.	stress										
22.	pain										
23.	cold, infection and temperature fluctuations										
24.	digestive system disorders/symptoms and food poisoning										
25.	skin, mucous membrane and nail disorders										
26.	sleeping disorders										
27.	occupational health and safety										
28.	addictions										
29.	oedema										
30.	weight disorders										
31.	ocular and hearing problems										
32.	tinea infections										
33.	parasite infections										
34	genitourinary tract infections										
35.	drug and other toxins poisoning										
36.	allergy										

II. Competences

How do you assess your formal competences to promote health in a pharmacy in the following items?

	Health knowledge	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
1.	Individual and social costs of health, disease and disability										
2.	Healthy nutrition as a precondition for building health potential										
3.	Physical activity and mobility as a source of health										
4.	Classification of factors of positive and negative effect on the human body										
5.	Pro-health, risky and anti-health behaviours										
6.	Creation of safe conditions for life, work, education, leisure and communication										
7.	Observation of functioning of own body – scope and importance of self-examination										
8.	Prophylactic examinations as an element of early detection of diseases										
9.	Preventive vaccination – myths and reality										
10.	Health situations acc. to need for medical consultation and self-treatment after consultation with a pharmacist										
11.	Provision of pre-medical care in emergency situations										

	Prevention of	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
12.	cardiovascular system diseases										
13.	neoplasms										
14.	psychiatric diseases										
15.	respiratory system diseases										
16.	genitourinary system diseases										
17.	spine and motor system diseases										
18.	stomatognatic system diseases										
19.	metabolic diseases										
20.	digestive system diseases										

	Copying with	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
21.	stress										
22.	pain										
23.	cold, infection and temperature fluctuations										
24.	digestive system disorders/symptoms and food poisoning										
25.	skin, mucous membrane and nail disorders										
26.	sleeping disorders										
27.	occupational health and safety										
28.	addictions										
29.	oedema										
30.	weight disorders										
31.	ocular and hearing problems										
32.	tinea infections										
33.	parasite infections										
34	genitourinary tract infections										
35.	drug and other toxins poisoning										
36.	allergy										

III. Relevance

How do you assess relevance of health promotion in a pharmacy in the following items?

	Health knowledge	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
1.	Individual and social costs of health, disease and disability										
2.	Healthy nutrition as a precondition for building health potential										
3.	Physical activity and mobility as a source of health										
4.	Classification of factors of positive and negative effect on the human body										
5.	Pro-health, risky and anti-health behaviours										
6.	Creation of safe conditions for life, work, education, leisure and communication										
7.	Observation of functioning of own body – scope and importance of self-examination										
8.	Prophylactic examinations as an element of early detection of diseases										
9.	Preventive vaccination – myths and reality										
10.	Health situations acc. to need for medical consultation and self-treatment after consultation with a pharmacist										
11.	Provision of pre-medical care in emergency situations										

	Prevention of	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
12.	cardiovascular system diseases										
13.	neoplasms										
14.	psychiatric diseases										
15.	respiratory system diseases										
16.	genitourinary system diseases										
17.	spine and motor system diseases										
18.	stomatognatic system diseases										
19.	metabolic diseases										
20.	digestive system diseases										

	Copying with	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
21.	stress										
22.	pain										
23.	cold, infection and temperature fluctuations										
24.	digestive system disorders/symptoms and food poisoning										
25.	skin, mucous membrane and nail disorders										
26.	sleeping disorders										
27.	occupational health and safety										
28.	addictions										
29.	oedema										
30.	weight disorders										
31.	ocular and hearing problems										
32.	tinea infections										
33.	parasite infections										
34	genitourinary tract infections										
35.	drug and other toxins poisoning										
36.	allergy										

IV. Motivations

How do you assess your motivations to promote health in a pharmacy in the following items?

	Health knowledge	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
1.	Individual and social costs of health, disease and disability										
2.	Healthy nutrition as a precondition for building health potential										
3.	Physical activity and mobility as a source of health										
4.	Classification of factors of positive and negative effect on the human body										
5.	Pro-health, risky and anti-health behaviours										
6.	Creation of safe conditions for life, work, education, leisure and communication										
7.	Observation of functioning of own body – scope and importance of self-examination										
8.	Prophylactic examinations as an element of early detection of diseases										
9.	Preventive vaccination – myths and reality										
10.	Health situations acc. to need for medical consultation and self-treatment after consultation with a pharmacist										
11.	Provision of pre-medical care in emergency situations										

	Prevention of	1	2	3	4	5	6	7	8	9	10
12.	cardiovascular system diseases										
13.	neoplasms										
14.	psychiatric diseases										
15.	respiratory system diseases										
16.	genitourinary system diseases										
17.	spine and motor system diseases										
18.	stomatognatic system diseases										
19.	metabolic diseases										
20.	digestive system diseases										

	Copying with	1	2	3	4	5	6	7	8	9	10
21.	stress										
22.	pain										
23.	cold, infection and temperature fluctuations										
24.	digestive system disorders/symptoms and food poisoning										
25.	skin, mucous membrane and nail disorders										
26.	sleeping disorders										
27.	occupational health and safety										
28.	addictions										
29.	oedema										
30.	weight disorders										
31.	ocular and hearing problems										
32.	tinea infections										
33.	parasite infections										
34	genitourinary tract infections										
35.	drug and other toxins poisoning										
36.	allergy										

V. Effectiveness

How do you assess your effectiveness in health promotion in a pharmacy in the following items?

	Health knowledge	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
1.	Individual and social costs of health, disease and disability										
2.	Healthy nutrition as a precondition for building health potential										
3.	Physical activity and mobility as a source of health										
4.	Classification of factors of positive and negative effect on the human body										
5.	Pro-health, risky and anti-health behaviours										
6.	Creation of safe conditions for life, work, education, leisure and communication										
7.	Observation of functioning of own body – scope and importance of self-examination										
8.	Prophylactic examinations as an element of early detection of diseases										
9.	Preventive vaccination – myths and reality										
10.	Health situations acc. to need for medical consultation and self-treatment after consultation with a pharmacist										
11.	Provision of pre-medical care in emergency situations										

	Prevention of	1	2	3	4	5	6	7	8	9	10
12.	cardiovascular system diseases										
13.	neoplasms										
14.	psychiatric diseases										
15.	respiratory system diseases										
16.	genitourinary system diseases										
17.	spine and motor system diseases										
18.	stomatognatic system diseases										
19.	metabolic diseases										
20.	digestive system diseases										

	Copying with	1	2	3	4	5	6	7	8	9	10
21.	stress										
22.	pain										
23.	cold, infection and temperature fluctuations										
24.	digestive system disorders/symptoms and food poisoning										
25.	skin, mucous membrane and nail disorders										
26.	sleeping disorders										
27.	occupational health and safety										
28.	addictions										
29.	oedema										
30.	weight disorders										
31.	ocular and hearing problems										
32.	tinea infections										
33.	parasite infections										
34	genitourinary tract infections										
35.	drug and other toxins poisoning										
36.	allergy
