Supplementary File S1: Sample questions from the topic list.

Domain ASE model	Sample question
Knowledge	How would you define physical activity? What does a day look like for you? What kind of activities are you usually doing in and around the house? How much exercise or sport do you have now?
Attitude	How do you feel about physical activity? Why? What are your preferences regarding physical activity? Do you prefer physical activity individually or in a group? Do you prefer physical activity at home or in a sports facility? Do you prefer physical aca (sports) activity or by engaging in daily activities/hobbies? Do you think you should be physically active / you should have exercise?
Barriers	What are the reasons for you to be less physically active? Do you have symptoms that you think affect physical activity? If so, what kind of symptoms? If so, to what extent? If so, how does this affect the extent to which you move? On what kind of days is it more difficult for you to move?
Stimuli	What are reasons for you to be more physically active? On what kind of days is it easier for you to be physically active?
Self-efficacy	Do you see opportunities to be physically active or exercise in your environment? What kind of opportunities do you see? What opportunities are you missing? What does a day look like for you? What kind of activities are you usually doing in and around the house? Are you consciously thinking about physical activity? If so, what are you thinking about? If so, does this affect the degree of activity? If so, does this affect the type of activity? What are your strategies for solving barriers? Do you think you can overcome the barriers? If so, how? Who or what would help you to be physically active on difficult days? Why? How do you ensure that you still are active on days when it is more difficult for you (barriers)? Are you unsure about anything related to physical activity?
Intention	What makes you physically active? How often would you like to be active (ideal physical activity pattern)? Do you achieve this ideal physical activity pattern?

Domain ASE model	Sample question
	What makes you achieve this or not? (self-efficacy) Is being physically active important to you? Why? What are your personal preferences regarding physical activity? If barriers for physical activity are mentioned: What would you do if the barriers were not present? Do you have any influence on this? (self-efficacy)
Social influence and social support	Do you receive support or guidance in physical activity? If so, by whom? If so, does this affect the degree of activity? If so, does this affect the type of activity? How do you think about support or guidance in physical activity? During the process of diagnosis, treatment and aftercare by health care professionals, has physical activity been discussed with you? If so, by what kind of health care professionals? If so, what was discussed with you? Does this affect or did this affect the degree of physical activity? Does this affect or did it affect the type of physical activity? Looking back, would you have wanted to receive more support/advice and in what phase of the treatment? If so, how could this have affected physical activity? How would you feel about receiving (possibly extra) guidance in physical exercise? What do you think this guidance should consist of? Who do you feel should do this? In what way? How will this affect your degree of physical activity? In what way are the people around you physically active? What type of physical activity are they doing? To what extend are they physically active? Does this affect the extent to which you are physically active? (if so, what kind of influence?) Does this affect the type of your physical activity you have? (if so, how?) How does this affect your choices regarding physical activity?
