

Supplementary material

Supplementary Figure S1. Total serum concentration (O.D. 450nm) of specific IgG (A) and IgA (B) for SARS-CoV-2 antigens before (pre) and after 30 days (post) of administration of the second dose of ChadOx-1 vaccine in the subgroups of older men and older women who regularly practiced (PE) or not (NPE) a physical exercise program before the pandemic period. Data are presented as median and interquartile range. * $p < 0.05$; ** $p < 0.01$.
