## Supplementary Materials:

**Table S1.** Sequence and spectral (MS, UV) and chromatographic data of tripeds 1,2,FL-1, FL-2, ASO-22 and RNA.

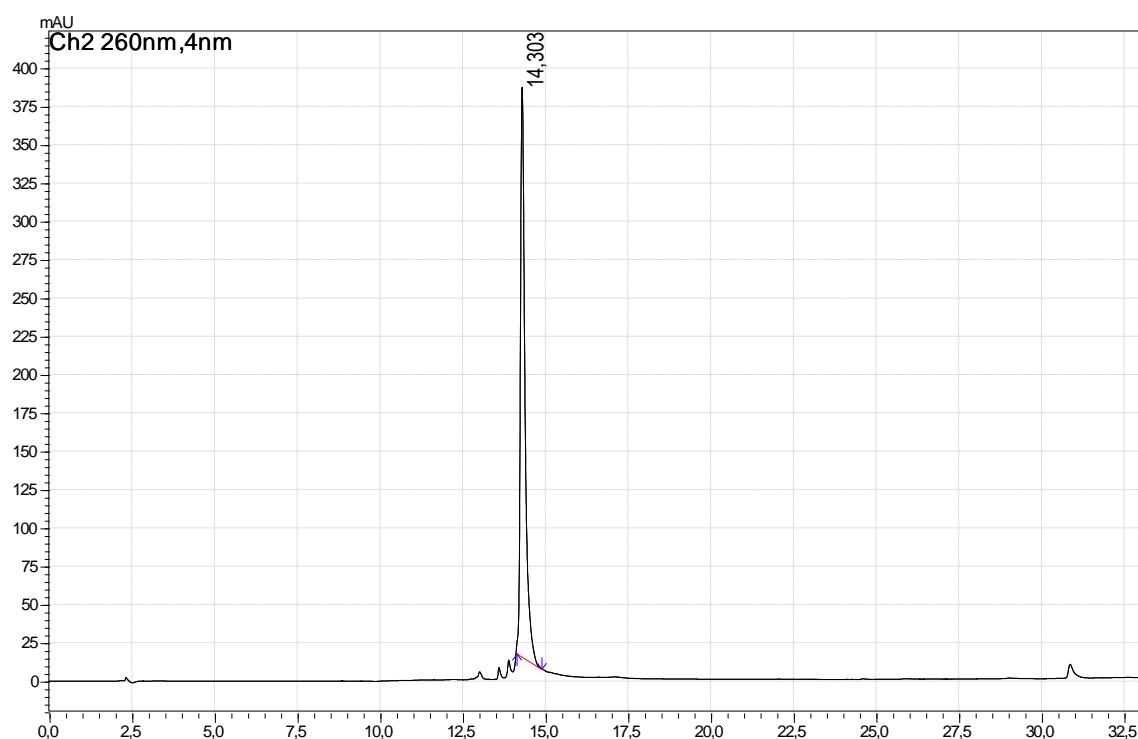

| Comp. No. | Oligonucleotide sequence  | MW <sub>calc.</sub> | m/z                   | Rt [min] <sup>a</sup> | λ <sub>max</sub> [nm] |
|-----------|---|---------------------|-----------------------|-----------------------|-----------------------|
| ASO-22    | 5'-d(TTT CTT TTC CTC CAG AGC CCGA)-3'   | 6612.28             | 6612.07 <sup>b</sup>  | 12.94                 | 263                   |
| RNA       | 3'-AAA GAA AAG GAG GUC UCG GGCU-5'  | 7167.38             | 7168.27               | 15.3                  | 256                   |
| ASO-C     | 5'-d(ATG AAG GTT CAA TCT GAT TTT)- 3'   | 6450.3              | 6450.12               | 12.76                 | 259                   |
| 1         | <br>O-3'-d(AGCC CGA GAC CTC CTT TTC TTT)-5'<br>O-3'-d(AGCC CGA GAC CTC CTT TTC TTT)-5' | 13652.92            | 13653.55 <sup>c</sup> | 13.38                 | 261                   |

|      |   |          |                       |       |           |
|------|---|----------|-----------------------|-------|-----------|
| 2    | <p>HO</p> <p>O-3'-d(AAAG AAA AGG AGG TCT CGG GCT)-5'</p> <p>O-3'-d(AAAG AAA AGG AGG TCT CGG GCT)-5'</p>             | 14143.29 | 14143.75 <sup>c</sup> | 12.47 | 258       |
| FL-1 | <p>HO</p> <p>O-3'-d(AGCC CGA GAC CTC CTT TTC TTT)-6-FAM-5'</p> <p>O-3'-d(AGCC CGA GAC CTC CTT TTC TTT)-6-FAM-5'</p> | 14724.91 | 14718.02 <sup>c</sup> | 14.30 | 261 / 494 |
| FL-2 | <p>HO</p> <p>O-3'-d(AAAG AAA AGG AGG TCT CGG GCT)-6-FAM-5'</p> <p>O-3'-d(AAAG AAA AGG AGG TCT CGG GCT)-6-FAM-5'</p> | 15215.30 | 15208.50 <sup>c</sup> | 13.69 | 257 / 494 |

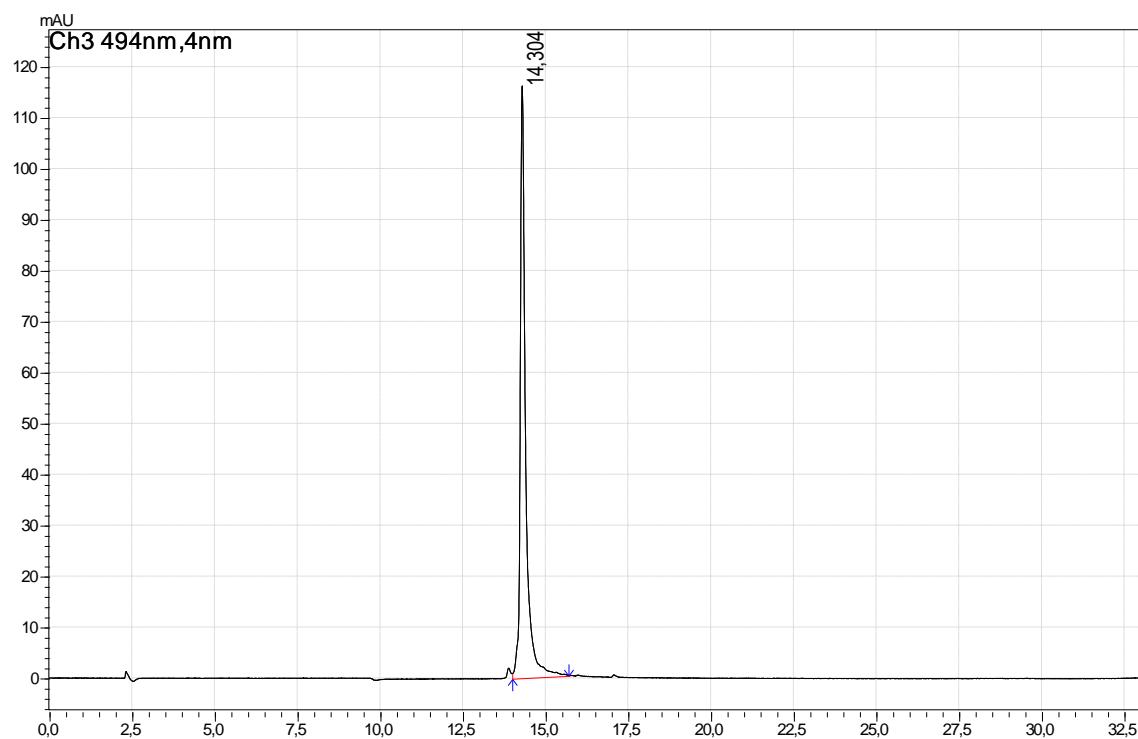

<sup>a</sup> The RP-HPLC conditions are described in the Materials and methods section. <sup>b</sup> The m/z ratio of an ion is measured by MALDI-TOF MS. <sup>c</sup> The m/z ratio of an ion is measured by ESI-Q-TOF MS.

**Figure S1. RP-HPLC preparative (A) and analytical (B) analysis of triped FL-1**

**A**

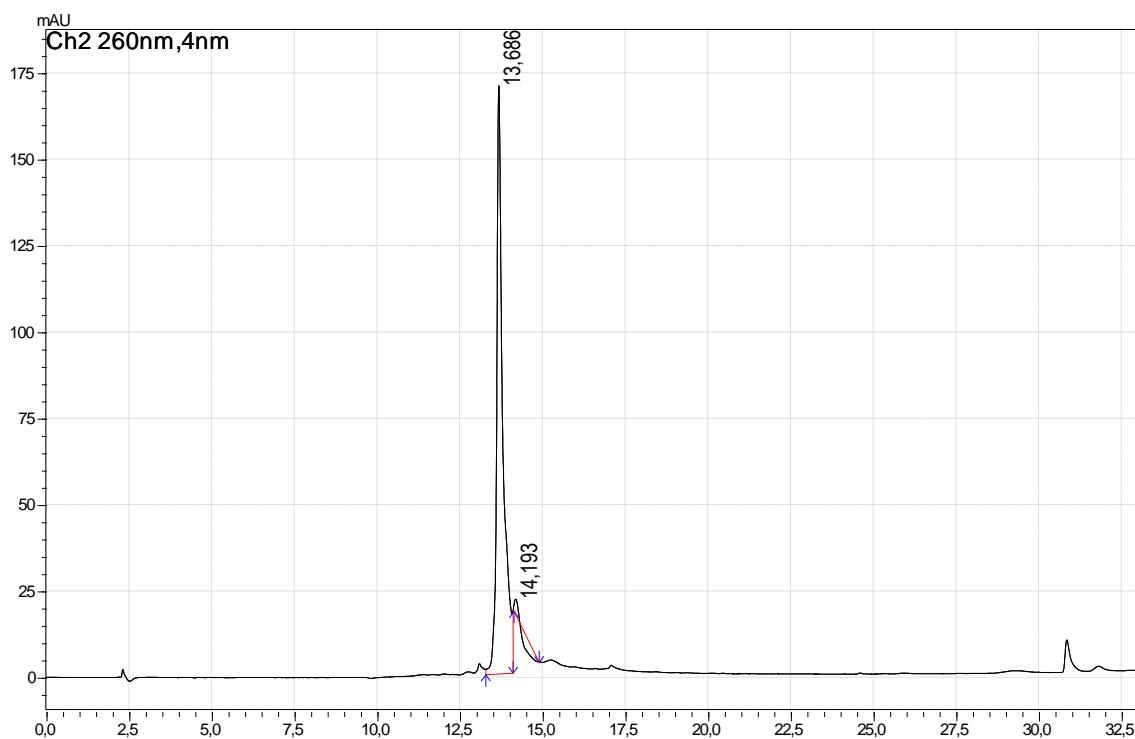

**B**

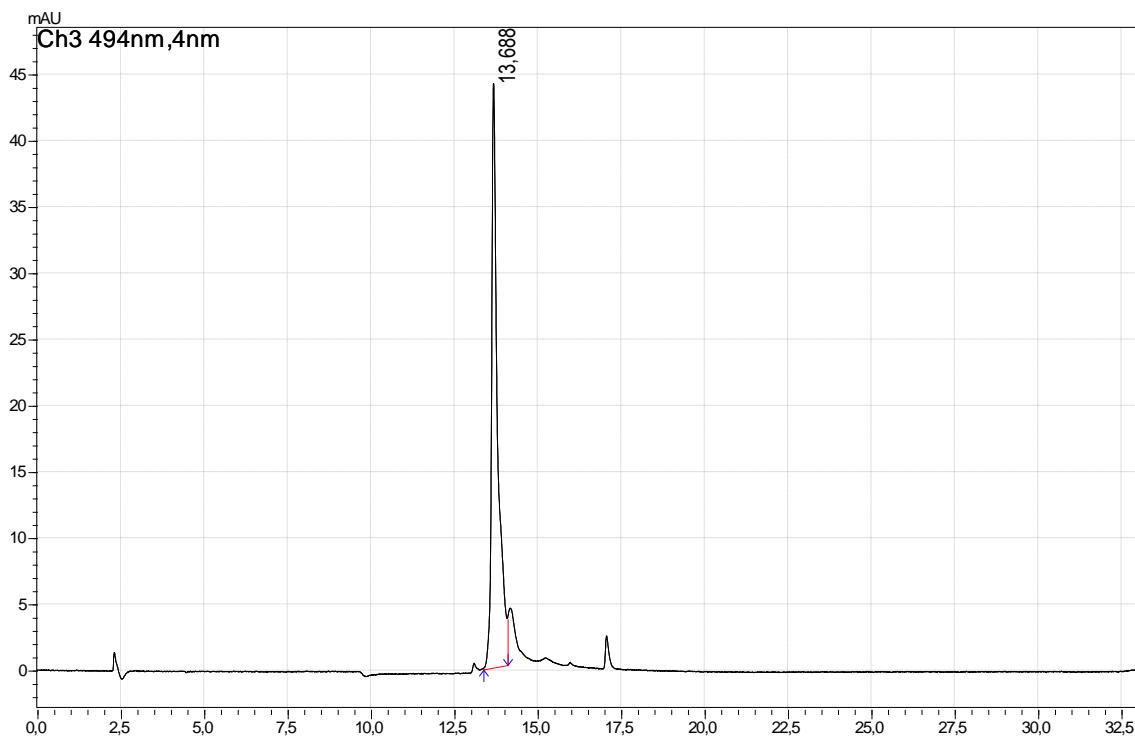

RP-HPLC conditions were as follow: the buffer A (0.1 M CH<sub>3</sub>COONH<sub>4</sub>) and buffer B (100% CH<sub>3</sub>CN). The buffer B gradient: 0→2 min 0%; 2→25 min 0-45%; 25→28 min 45-60%; 28→30 min 60-0%; 30→33 min 0%.

**Figure S2 RP-HPLC preparative (A) and analytical (B) analysis of triped FL-2**

**A**

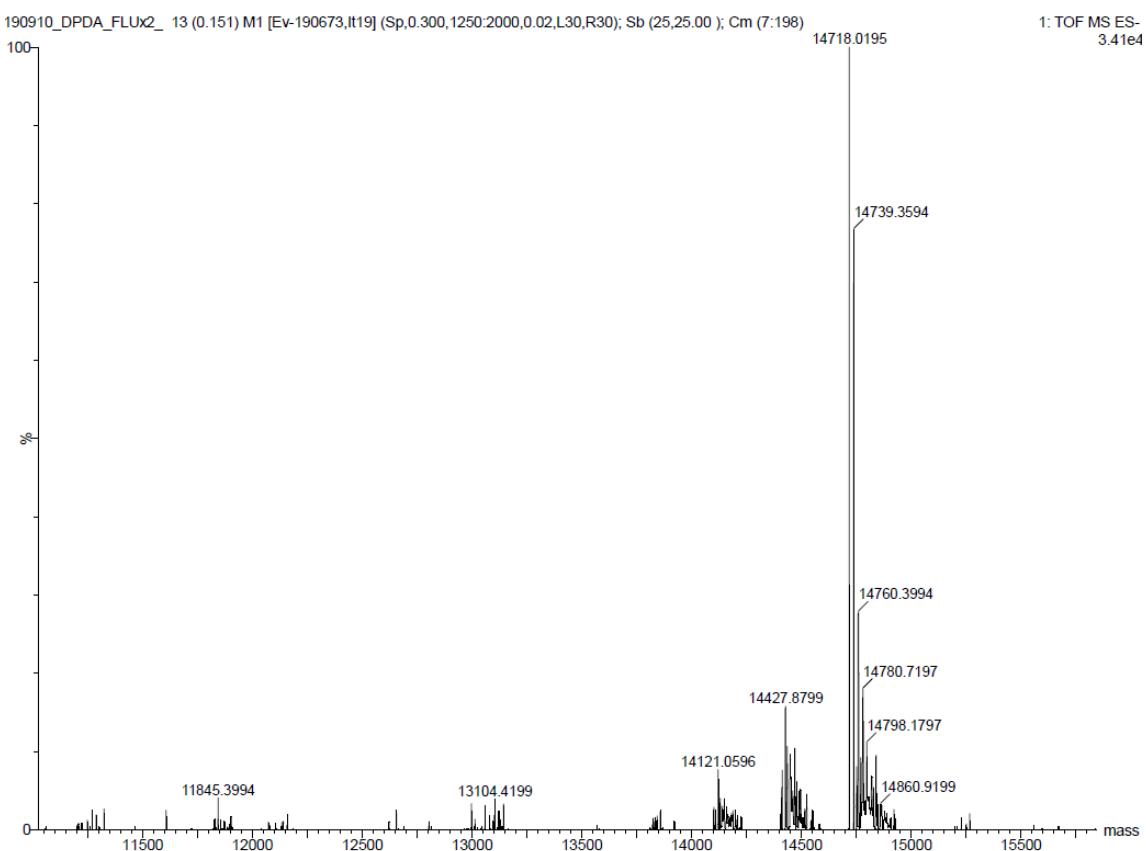

**B**

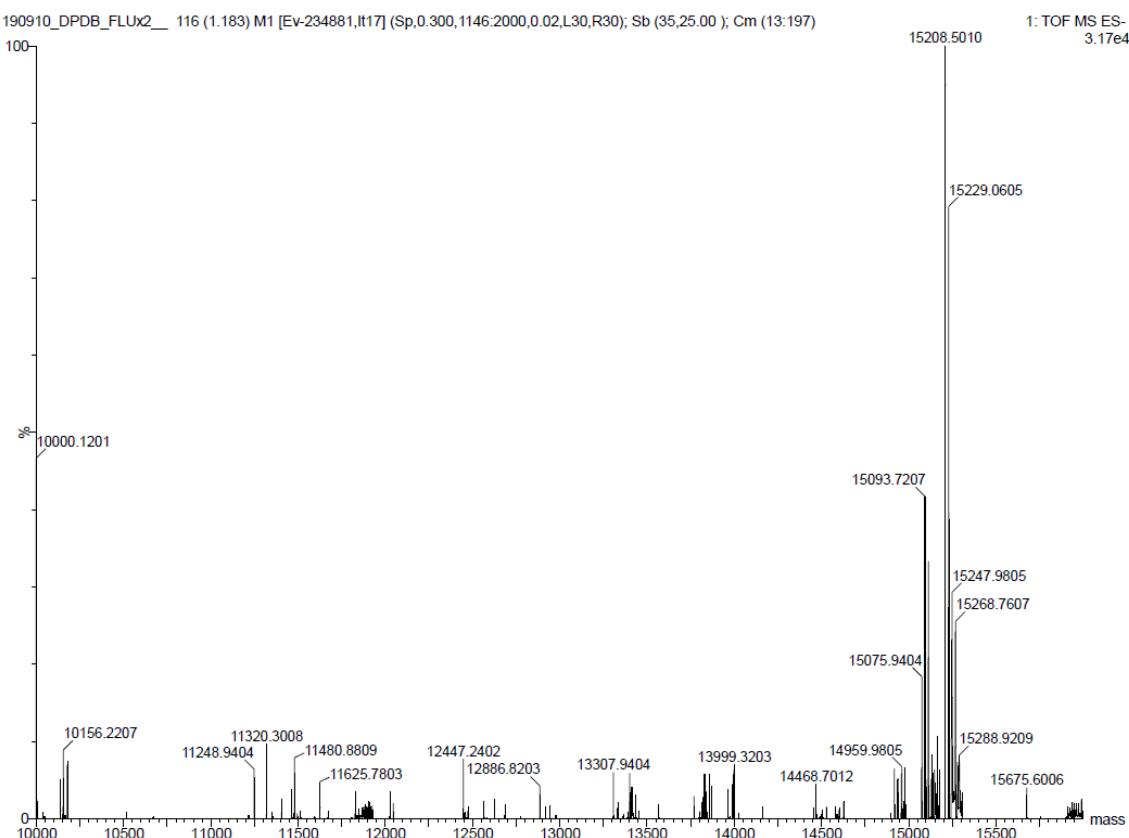

RP-HPLC conditions were as follow: the buffer A ( $0.1\text{ M CH}_3\text{COONH}_4$ ) and buffer B ( $100\%\text{ CH}_3\text{CN}$ ). The buffer B gradient:  $0\rightarrow 2\text{ min } 0\%$ ;  $2\rightarrow 25\text{ min } 0\text{-}45\%$ ;  $25\rightarrow 28\text{ min } 45\text{-}60\%$ ;  $28\rightarrow 30\text{ min } 60\text{-}0\%$ ;  $30\rightarrow 33\text{ min } 0\%$ .

**Figure S3** ESI-Q-TOF mass spectrometry analysis of triped **FL-1** (A) and **FL-2** (B).

A) **FL-1.** M.W. calc: 14724.91.;  $m/z$ : 14718.02

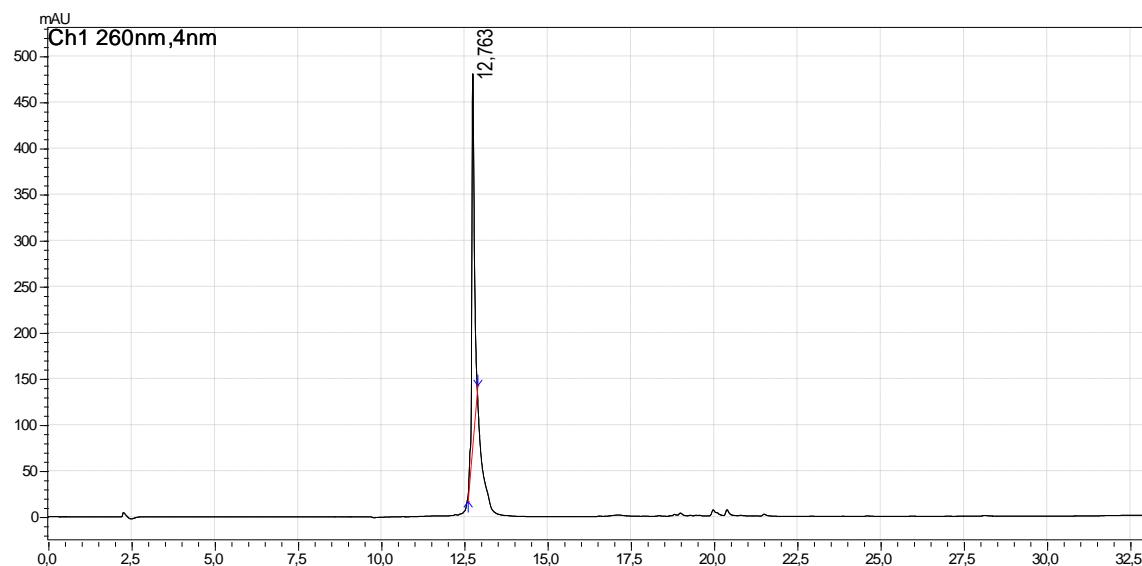

B) **FL-2** M.W. calc: 15215.;  $m/z$ : 15208.50

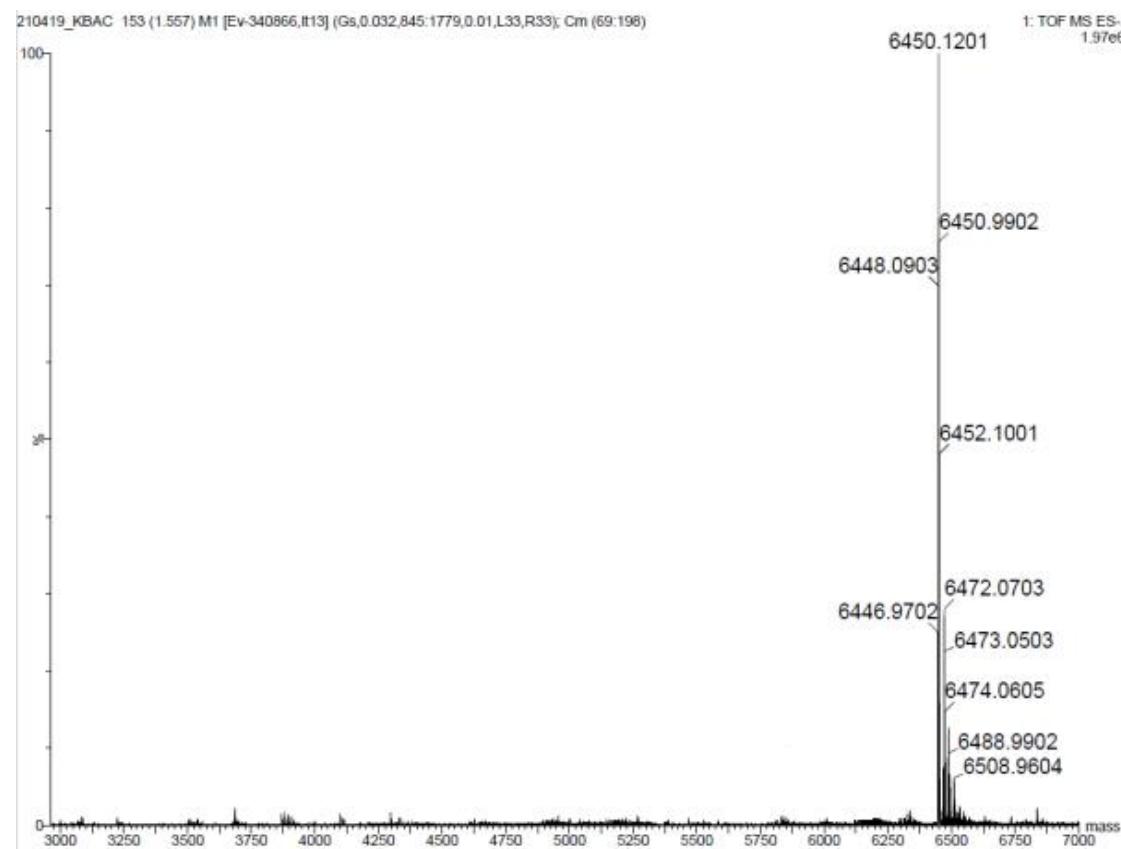

**Figure S4 RP-HPLC analytical analysis (A) and ESI-Q-TOF mass spectrometry analysis (B) of ASO-C**

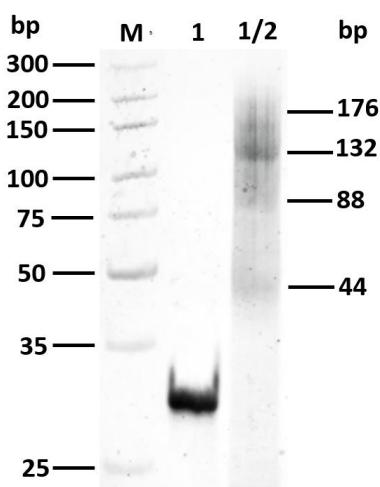

**A**

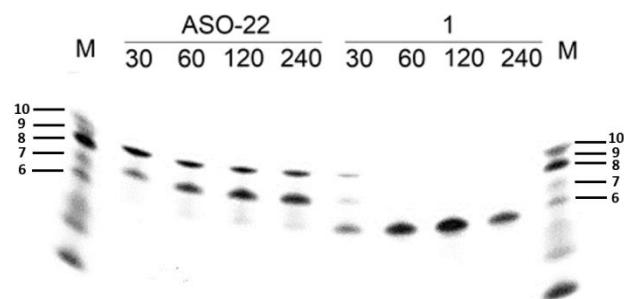

**B**

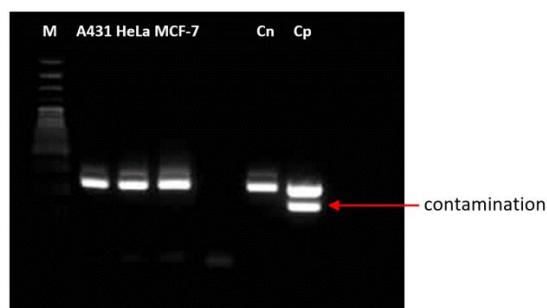

**Figure S5.** The efficiency of annealing of **1** and **2** (1:1 molar ratio) (lane 2) analyzed by non-denaturating PAGE and visualized by Stains All.

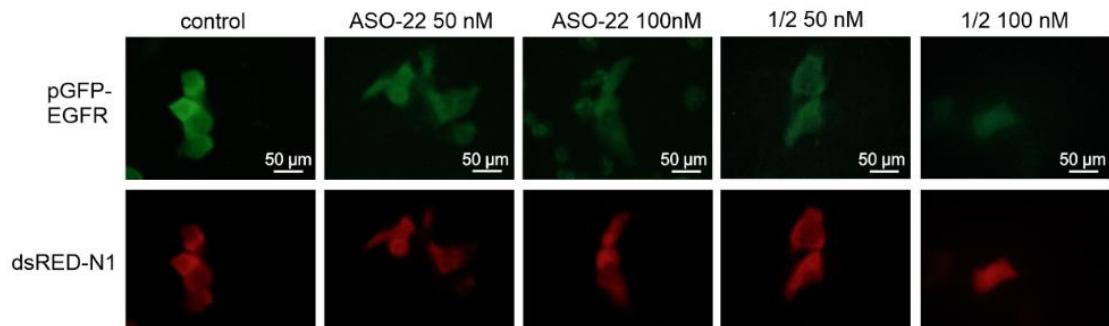

**Figure S6.** Prolonged incubation time of the cleavage reaction of RNA-1 up to 240 min with RNase H resulted in the increase of the content of 6-nt product for triped **1** and constant level products 9-nt and 7-nt RNA for oligonucleotide ASO-22.

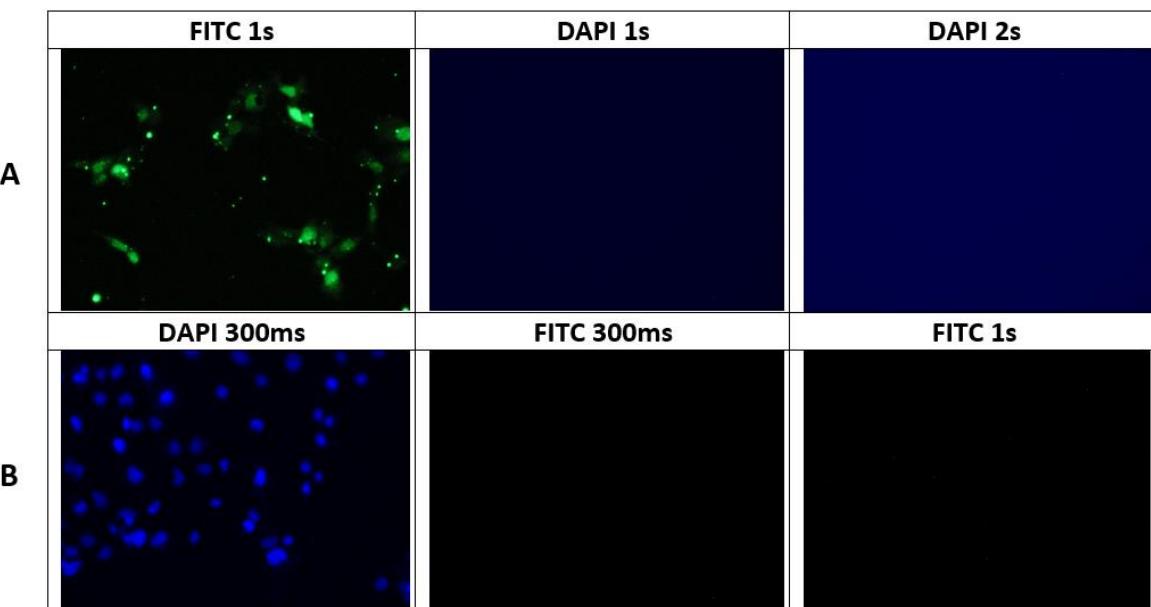

**Figure S7.** The agarose electrophoretic analysis of the PCR products of the cellular DNA isolated from A431, HeLa, MCF-7 cells amplified with the EZ-PCR™ Mycoplasma Detection Kit (BI, Cromwell, USA). Commercial negative (**Cn**) and positive controls of mycoplasma (**Cp**) were used for PCR reaction. The lack of the contamination product in DNA of tested cells is demonstrated.

**Figure S8.** Silencing activity of ASO-22 and **1/2** (50 and 100 nM) towards the exogenous EGFR mRNA monitored by fluorescence microscopy in a dual EGFR-EGFP/RFP fluorescence assay in A431 cells (DFA). The upper row presents the level of a green fluorescence representing the fusion EGFR-EGFP protein and the lower row presents expression of the red fluorescence protein (RFP) (control).

**Figure S9.** DAPI and FITC filters test demonstrating no emission signals of FITC and DAPI due to the DAPI and FITC fluorophores excitation, respectively. (A) A431 cells transfected with **FL-1/FL-2** (4  $\mu$ M) cells in the presence of lipofectamine 2000 and analyzed with the FITC filter (exposure time 1s) and checked with the DAPI filter (1s and 2s); (B) A431 cells treated with DAPI (5  $\mu$ g/mL) and analyzed using a DAPI filter (exposure time 300ms) and checked using a FITC filter (exposure time 300ms and 1s).

**Figure S10.** FACS analysis with confidence interval (CI) and the mean with standard deviation ( $\pm$ SD).
