## Supplementary Figure S1

**Figure S1. Effect of Selenbp1 ablation on the renal expression involved in the arachidonic acid metabolism related cyclooxygenase (COX) and lipoxygenase (LOX) enzymes.**

The kidneys were collected from 8-week old male mice which treated with 20 h fasting. The relative levels of mRNAs indicated were analysis by real-time RT-PCR and normalized by  $\beta$ -actin mRNA. Each bar represents the mean  $\pm$  S.E.M. of 6 mice.  $\beta$ -actin was used as an internal control. Abbreviations used: Alox, arachidonate lipoxygenase; Ptgs, prostaglandin-endoperoxide synthase.
