

**Figure S1**

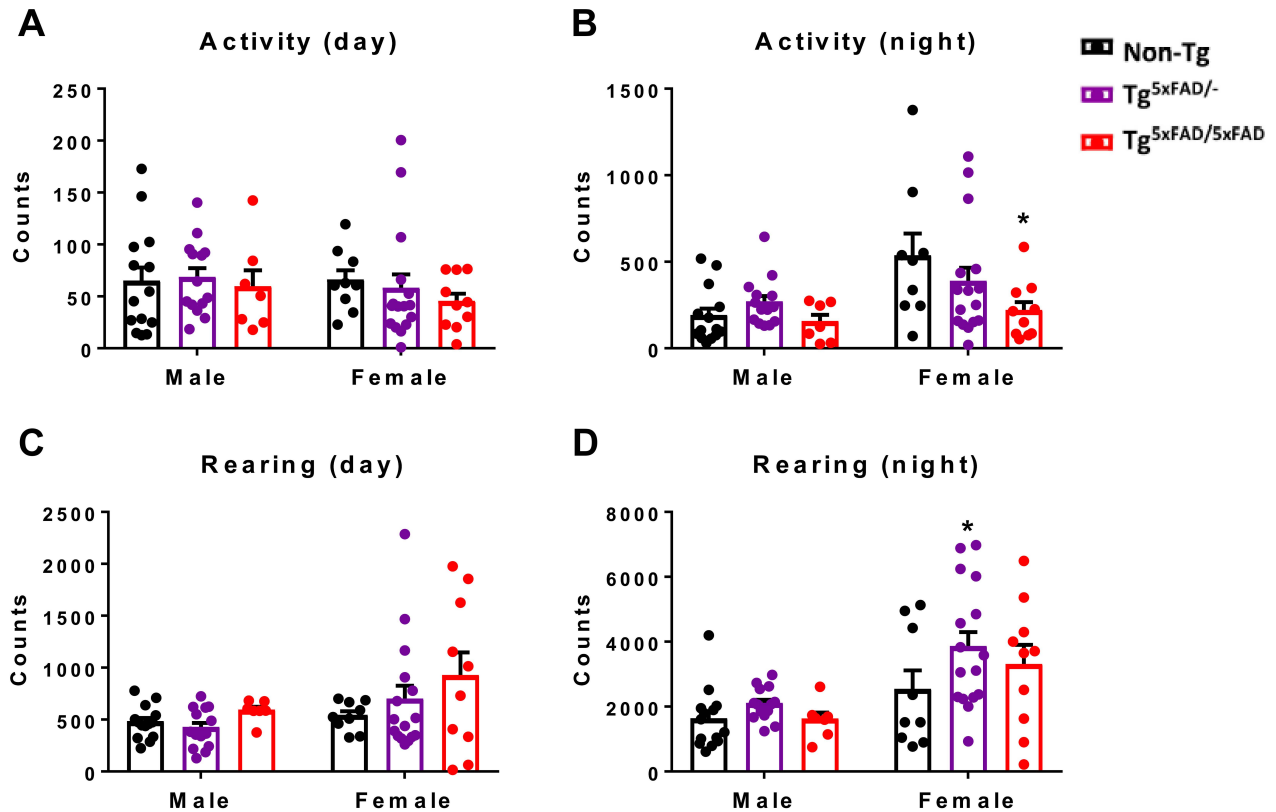

Figure S1: Activity (A,B) and rearing (C,D) measured as counts by infrared in 5xFAD mice placed in metabolic cages for 48 h, showing decreased activity in Tg<sup>5xFAD/5xFAD</sup> females during the night (n = 8–15 per group). Two-way ANOVA analysis with Tukey's post hoc test: \* = p < 0.05 versus same-sex non-Tg group.
