

Supplemental Figure 1. Determination of intraamniotic LPS treatment effect. 2-way ANOVA results showing significant treatment effect of CHORIO on brain HO-1 expression (FIG S1A, $p=0.0092$) but not on HO-2 or TfR1. Whereas, HO-2 (FIG S1B) and TfR1 (FIG S1C) were regulated significantly by postnatal age but not by treatment effect. p significant when <0.05 , 2-way ANOVA, Mean \pm SEM.
