

Supplementary Materials: Oligomerization and Nitration of the Grass Pollen Allergen Phl p 5 by Ozone, Nitrogen Dioxide, and Peroxynitrite: Reaction Products, Kinetics, and Health Effects

Anna T. Backes ^{1,*} , Kathrin Reinmuth-Selzle ¹, Anna Lena Leifke ¹, Kira Ziegler ¹, Carola S. Krevert ^{1,†}, Georg Tscheuschner ², Kurt Lucas ¹, Michael G. Weller ², Thomas Berkemeier ¹, Ulrich Pöschl ¹, and Janine Fröhlich-Nowoisky ^{1,*}

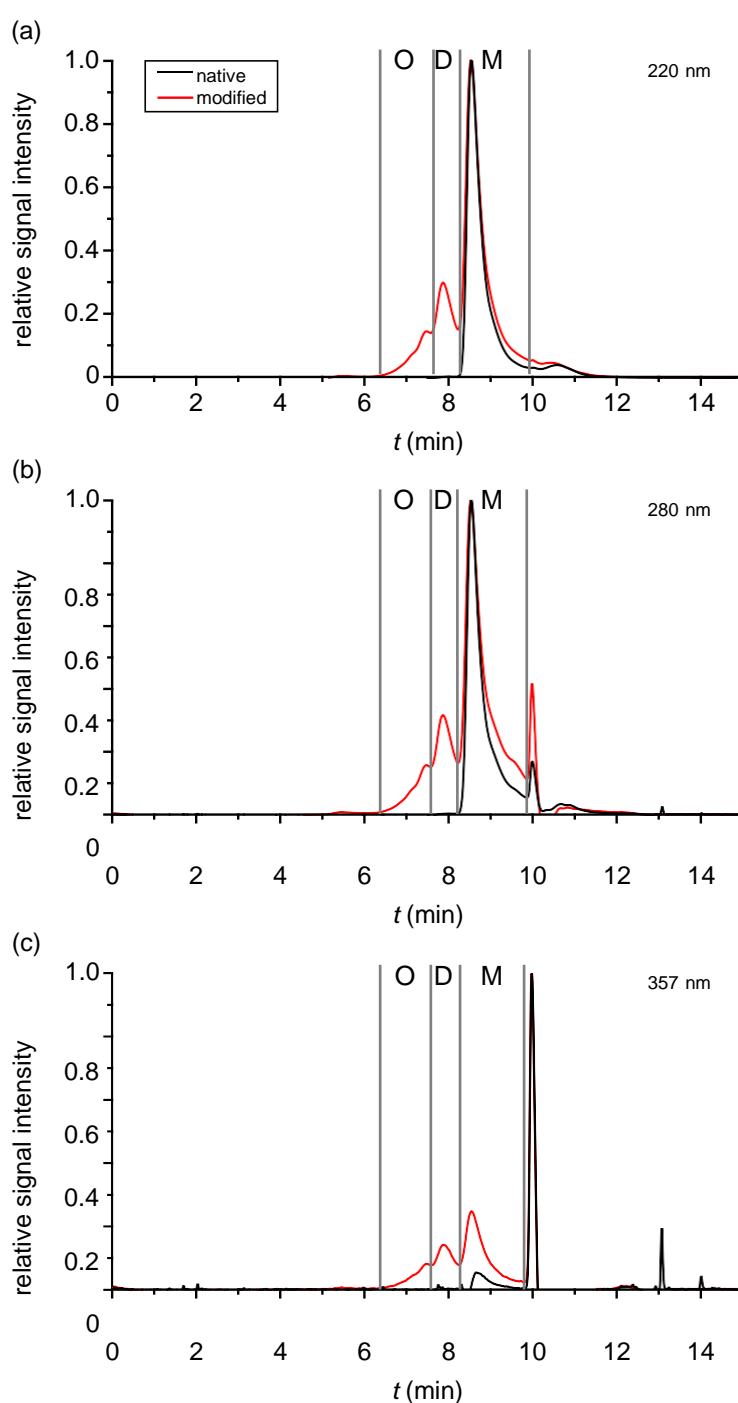

Figure S1. Exemplary chromatograms from the SEC-DAD analysis of Phl p 5 before (black) and after (red) exposure to O_3 and NO_2 measured at different wavelength: (a) 220 nm, (b) 280 nm, (c) 357 nm. Dashed grey lines separate monomer (M), dimer (D), and higher oligomer (O) fractions.

- (a) O_3/NO_2 (50/50 ppb), 10 h (b) O_3/NO_2 (200/200 ppb), 2 h (c) O_3/NO_2 (200/200 ppb), 10 h

- (d) ONOO^-/Tyr (1/1) (e) ONOO^-/Tyr (3/1) (f) ONOO^-/Tyr (5/1)

Figure S2. MALDI spectra of selected samples.

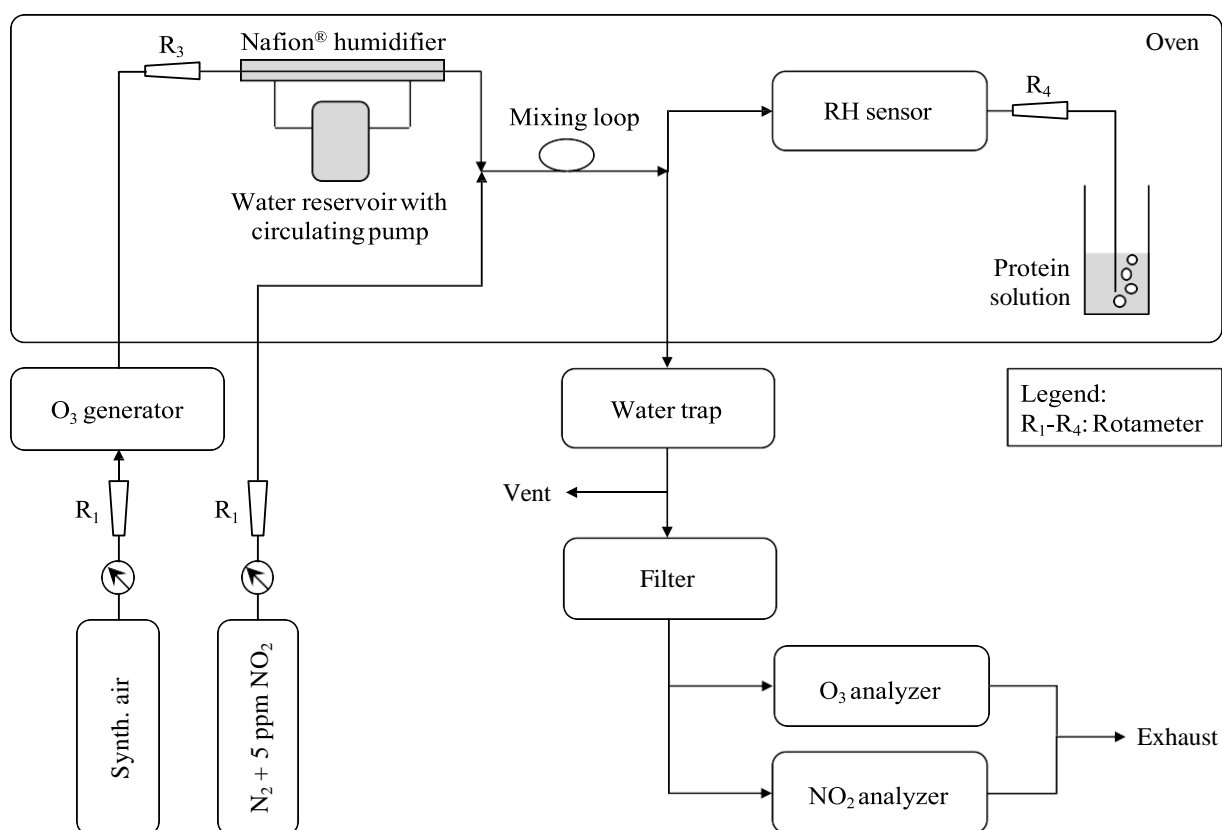

Figure S3. Experimental setup used for the exposure of Ph1p5 to O₃ and NO₂.
