Figure 6b. Jammed packing of semi-flexible chains of tangent hard spheres of uniform size with average length of $N = 100$ and an equilibrium angle of $\theta = 120^\circ$ at a packing density of $\phi = 0.637$. Monomers are colored according to the lowest value of the CCE norm. Blue, red, and green denote HCP, FCC, and FIV similarity, respectively. Sphere monomers are shown with coordinates of their centers being subjected to periodic boundary conditions.
