

Supplementary Materials

Supplementary Figure S1: Treatment with takinib and 5Z7O cause cell death. RASFs were starved overnight then treated with either 5Z7O, NG-25, or various doses of takinib with and without IL-1 β (10ng/ml) for 24 hours. Takinib caused significant cell death beginning at 10 μ M. MTT assay was performed on n=3 RASF cell lines from different donors. Statistical analysis was performed using one-way ANOVA with Dunnett's post-hoc test for multiple comparisons. Significance level is $p < 0.05$.
