

Supplemental Figures

**Supplemental Figure S1.** Live cell image of phenotypic changes in VSMC in the presence and absence of Klotho (A) Live cell time-lapse imaging following scratch assay closure with improved migration of klotho treated monolayers over 24 hrs ( $n=3$ ), (Image-J cell track module). (B) Representative images tracking the different live cell phenotypes over time (white arrows show progression from top to bottom images) for necrosis, mitosis and apoptosis.

**Supplemental Table S1.** List of drugs screened for changes in cell energetics.
