Figure S1. Sequence of purified PPP1CB (1-266) was highlighted in Red color.

Figure S2. Purified proteins according to the affinity tags. (A) Glutathione-S-transferase (GST)-tagged protein phosphatase-1 catalytic subunit beta (PPP1CB) was purified using the columns packed with glutathione resins. (B) Maltose-binding protein (MBP)-tagged PPP1CB was purified using amylose resins. (C) 1 - 6xHis-tagged PPP1CB was purified using talon resins. 2 - 6xHis tag was cleaved using caspase-3. 6xHis tag and caspase-3 were eliminated using talon resins. 3 - PPP1CB without any affinity tag was subjected to further purification using Superose-6.

Figure S3. Calibration curve of the fluorescence intensity versus DiFMU from 6.25 to 200 μM . DiFMU with various concentrations (6.25, 12.5, 25, 50, 100, 200 μM) in the reaction buffer (20 mM Tris pH 7.0, 150 mM NaCl, 0.01% Triton X-100, and 1 mM MnCl_2) was detected by a Victor X4 Multilabel Plate Reader at excitation and emission wavelengths of 355 and 460 nm.

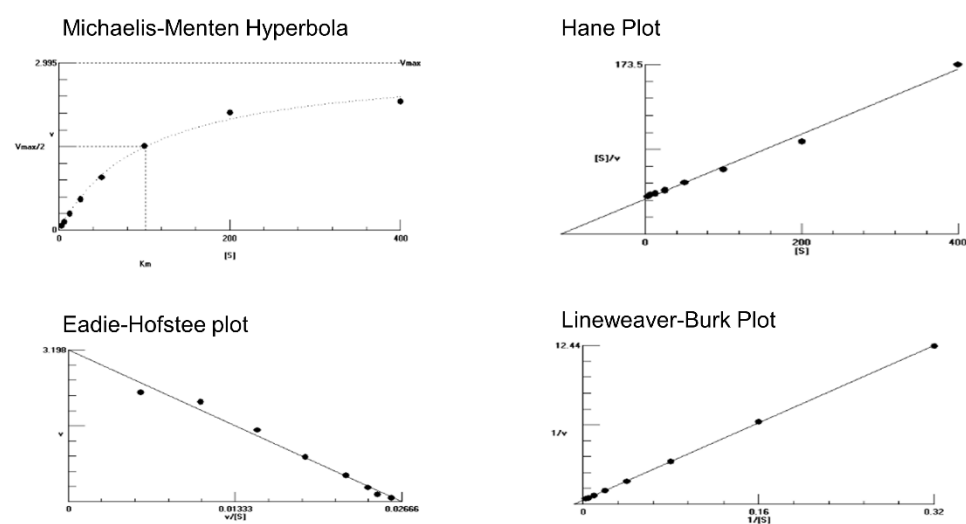

Figure S4. Kinetic graph of GST-Tagged-PPP1CB. Protein was added to reaction buffer containing each concentration of DifMUP (400, 200, 100, 50, 25, 12.5, 6.25, and 3.13 μM).

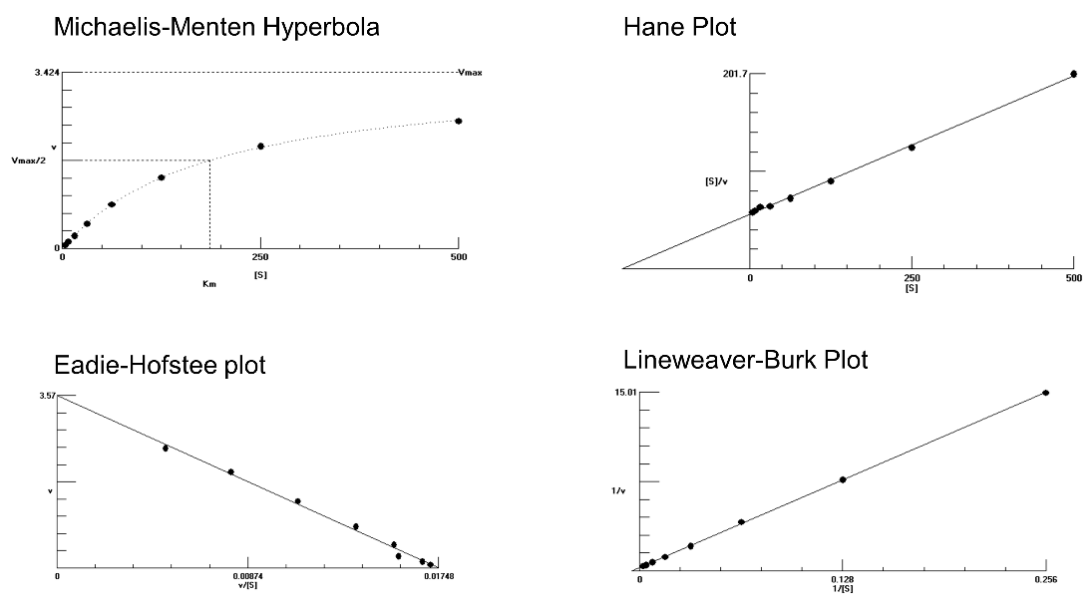

Figure S5. Kinetics graph of PPP1CB without tag. Protein was added to reaction buffer containing each concentration of DifMUP (500, 250, 125, 62.5, 31.25, 15.63, 7.81, and 3.91 μM).
