

Supplementary Figure S1. Venn diagram of Differentially Expressed Genes (DEG) in strain BL-323 during the infection process.

Comparison	# genes
14 vs 3	15
28 vs 3	43
28 vs 14	9

Comparison of DEG in the BL-323 strain at the day post-infection (PI). Fifteen genes were differentially expressed at D14 vs 3D PI; 43 genes were differentially expressed at D28 vs D3 PI, and 9 genes were differentially expressed at D28 vs D14 PI. Up arrows indicate over-expression, and down arrows indicate repression. Colours of circles and arrows indicate the comparison made.
