SUPPLEMENTARY FIGURES

Supplementary Figure S1

A

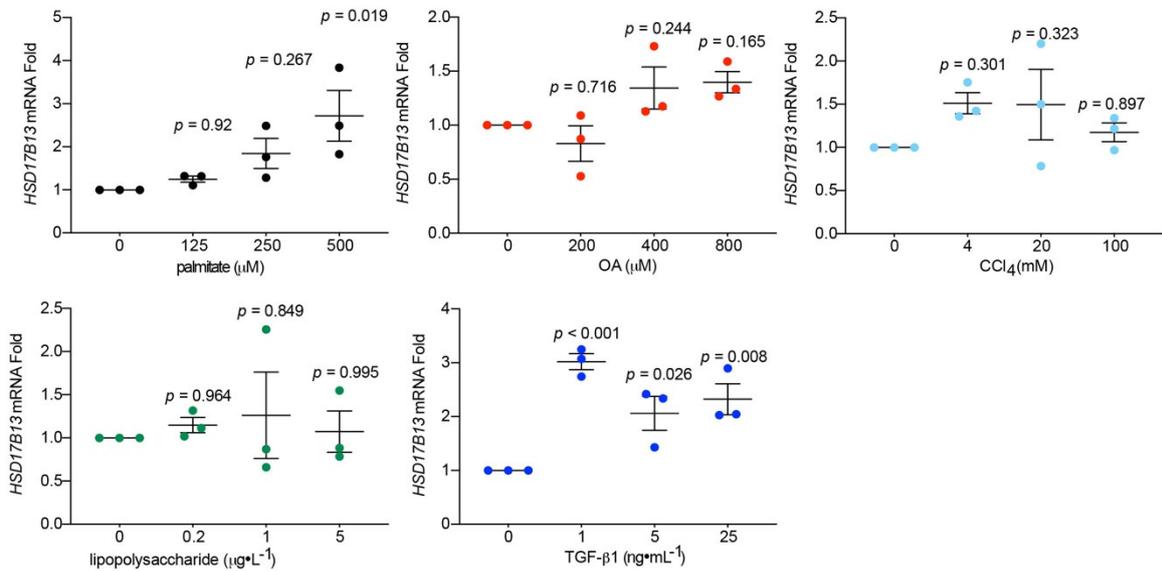

B

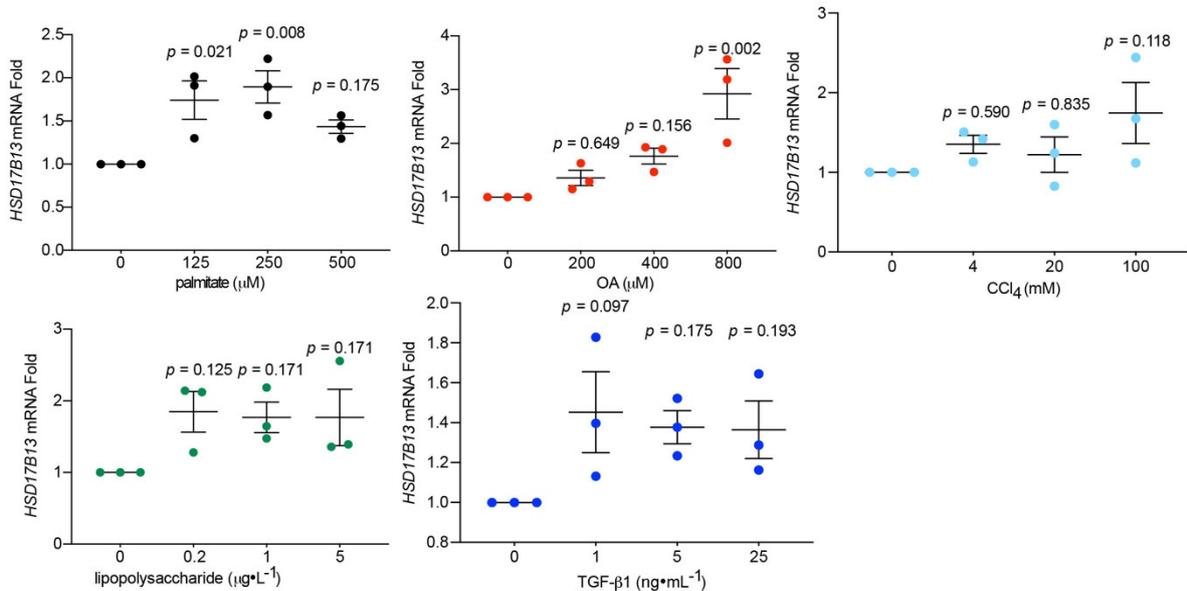

Supplementary Figure S1. Fibrosis-related factors are highly expressed in the livers of murine with NAFLD. mRNA (A) and protein (B) levels in the livers of murine models with NAFLD were measured by qRT-PCR and Western blotting, respectively. The equal loading control (ACTB) of protein was shown in **Figure 1E**. Results are expressed as mean \pm SEM. CCl₄, carbon tetrachloride; MCD, methionine choline deficient diet; CDHFD, choline deficient and high-fat diet; HFD, high-fat diet; DEN, diethylnitrosamine; BDL, bile-duct ligation; Col1a1, collagen type I alpha 1 chain; α -SMA, alpha-smooth muscle actin.

Supplementary Figure S2

A

B

Supplementary Figure S2. HSD17B13 is increased in hepatocytes treated by etiological agents. Huh7 (A) and HepG2 (B) cells were treated by palmitate, OA, CCl₄, lipopolysaccharide, or TGF- β 1 for 24 h, respectively. mRNAs were measured by qRT-PCR. Results are expressed as mean \pm SEM. OA, oil acid; CCl₄, carbon tetrachloride; TGF- β 1, transforming growth factor-beta 1. .

SUPPLEMENTARY TABLES

Supplementary Table S1. Patient information in DC-Liv00009 and H-Score for immunohistochemical analysis.
