

### Supplementary Figure 1: PG1035-PorP-PorE-PorK-PorN complex

*P. gingivalis* wildtype and the *pg1035* mutant strain were subjected to co-immunoprecipitation with agarose beads bound to PG1035 antibodies. The immunoprecipitated samples were digested with trypsin and analysed by mass spectrometry and quantified using MaxQuant software. The ratio of LFQ intensities of WT to *pg1035* mutant was plotted.
