

Supplementary Table S4. Sterlet embryo viability and hatching rate following exposure to different concentrations of olaparib (5, 10, 20 μ M). Embryos were exposed to olaparib from 2 till 24 hours post-fertilization. All results are presented at 8 days post-fertilization. Results represent mean of two independent experiments, number of embryos N = 100.

Treatment	Live, %	Hatched, %
Control	91	76
Olaparib 5 μ M	96	62
Olaparib 10 μ M	92	56
Olaparib 20 μ M	40	7
