

Figure S1. Effects of melatonin on gene expression under salt stress in wheat seed by qRT-PCR. Genes: TraesCS2D02G107900, TraesCS7D02G369700, TraesCS2A02G143500, TraesCS2D02G220200, and TraesCS4D02G281900LC. SM4: germination of seeds treated with 200 μ M melatonin under 200 mM NaCl solution; S: germination of seeds treated with 200 mM NaCl.

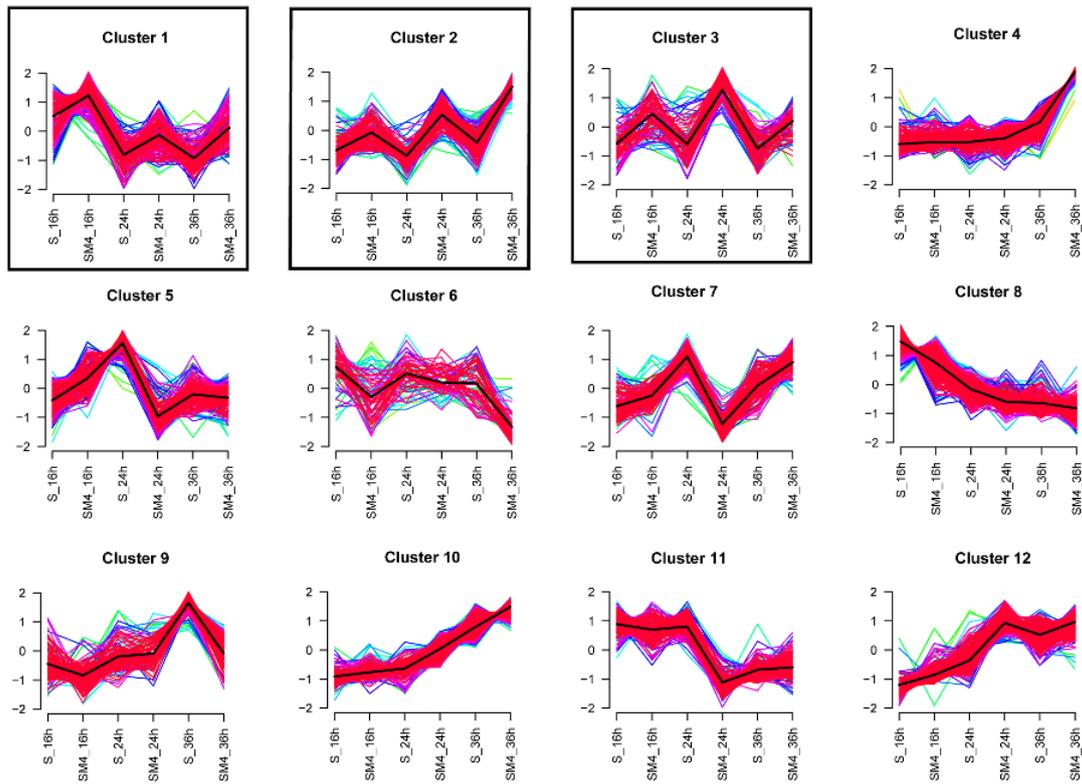

Figure S2. Clustering of all DEGs based on their expression patterns in S and SM4 at 16 h, 24 h and 36 h. 12 clusters shown different expression patterns, and cluster 1, cluster 2 and cluster 3 were selected to further analysis. The abscissa represented different treatment in different time and ordinate represented normalized expression value. The black lines represented the mean expression trend of DEGs (other lines) belonging to each cluster.

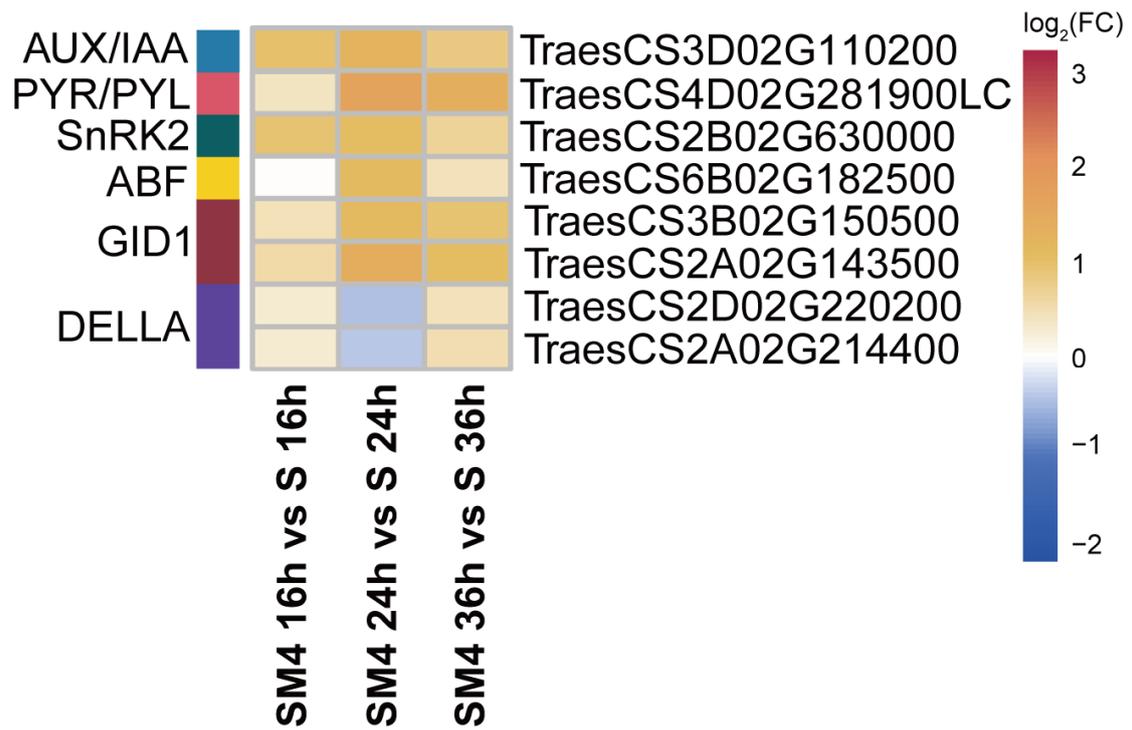

Figure S3. The heatmap of the DEGs in the pathway of plant hormone signal transduction. The color scale of the heat map represents up-regulated (red) and down-regulated (blue).

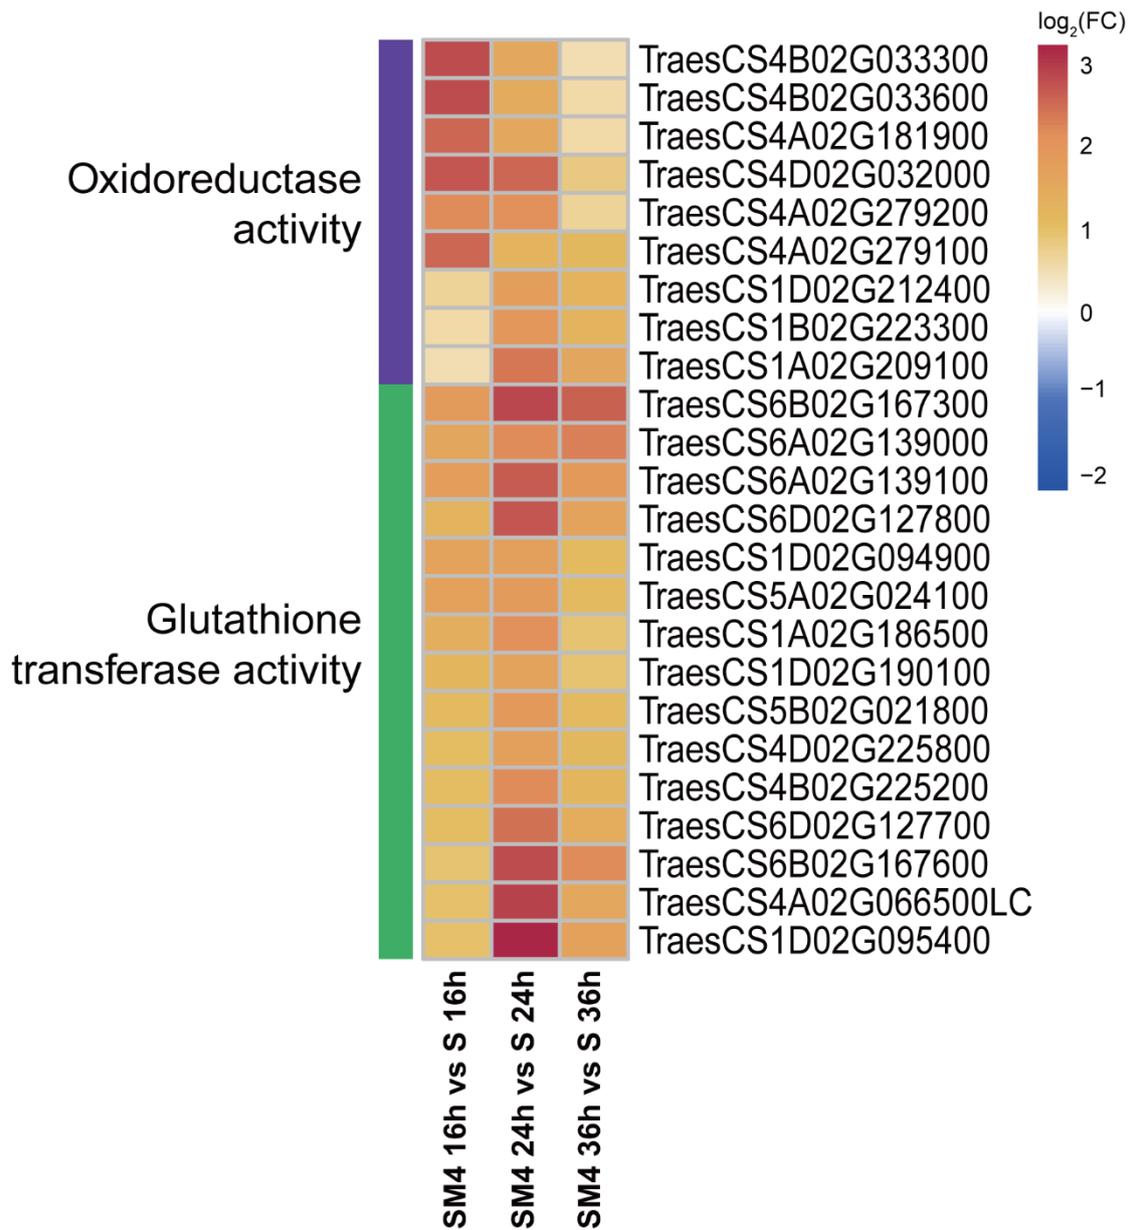

Figure S4. The heatmap of the DEGs in oxidoreductase activity and glutathione transferase activity. The color scale of the heat map represents up-regulated (red) and down-regulated (blue).

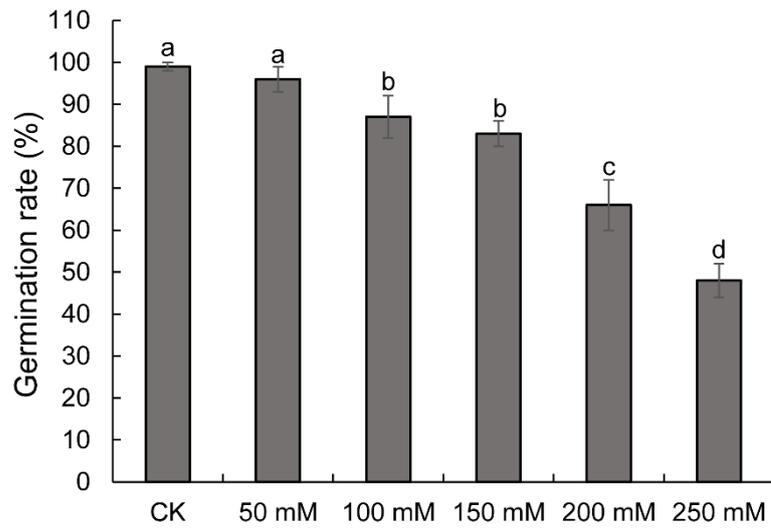

Figure S5. The germination rate of the wheat seeds in different NaCl concentration. The error bar in the figure represents the SD (n = 3). Different letters represent significant ($P < 0.05$).

Table S1. Quality statistics of filtered transcriptome Reads.

Sample	Total Raw Reads (M)	Total Clean Reads (M)	Total Clean Bases (Gb)	Clean Reads Q20 (%)	Clean Reads Q30 (%)	Clean Reads Ratio (%)
SM4-16h-1	82.7	69.01	10.35	95.29	89.44	83.44
