

Table S2. The differences of photosynthetic parameters in Masson pine seedlings under shade and drought treatments. CK: control; LL: Low light; DR: drought; DL (DR+LL): the combined stress of drought and low light. P_n, net photosynthesis rate; G_s, stomatal conductance; C_i, intercellular CO₂ concentration; T_r, transpiration rate; WUE, water use efficiency; L_s, stomatal limitation. The lowercase letter represented the significance of difference at $P<0.05$ level among the treatments.
