# Kim et al. Figure S1

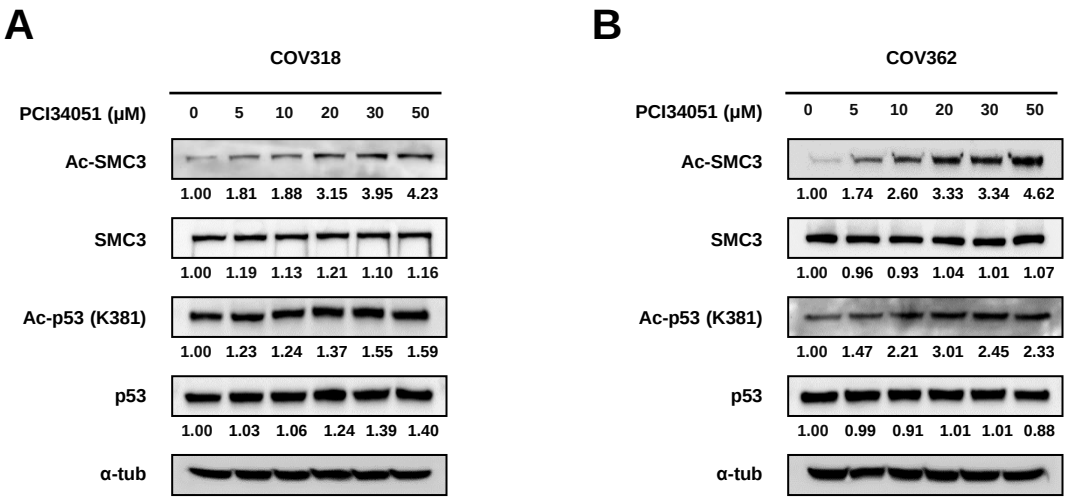

**Figure S1.** PCI-34051 has limited effects in enhancing p53 stability in p53 mutant ovarian cancer cells. Immunoblotting of acetyl-p53. (**A**) COV318 and (**B**) COV362 cells were treated with indicated doses of PCI-34051 for 24h. Protein expression levels were semi-quantified relative to loading control, $\alpha$-tubulin.

# Kim et al. Figure S2

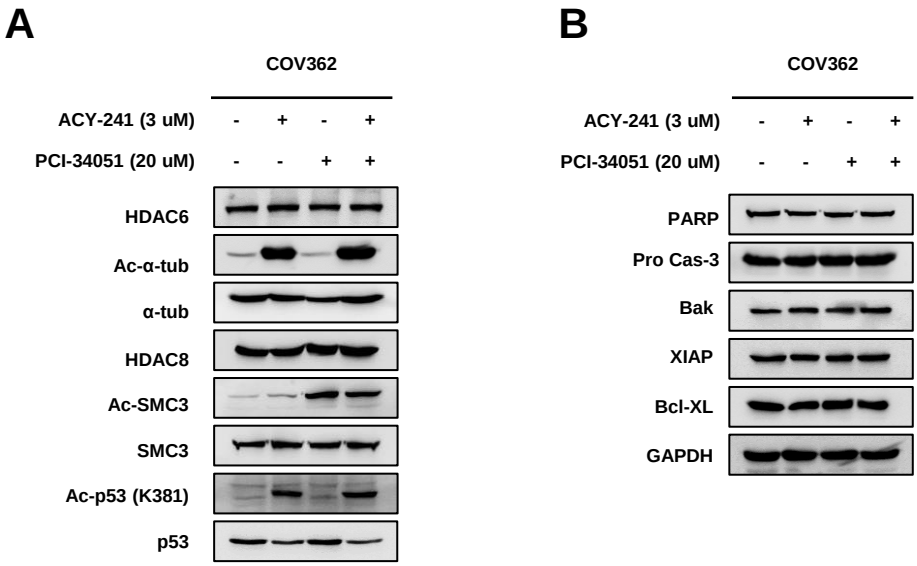

**Figure S2.** ACY-241 and PCI-34051 does not have a synergistic anti-cancer effect in p53 mutant ovarian cancer cells (A) Immunoblotting of HDAC inhibition markers. Cells were treated with 3 μM ACY-241 and 20 μM PCI-34051 alone or in combination for 24 h. (B) Immunoblotting of pro-apoptotic markers and anti-apoptotic markers in COV362 treated with 3 μM ACY-241 and 20 μM PCI-34051 alone or in combination for 24 h.
