

Supplementary Figure S3. 53BP1-pH2A.X PLA Analysis and DDR marker cell-cycle distribution. Cells stained for the detection of 53BP1-γH2A.X PLA spots were subjected to the described image-cytometry analysis. The distribution of the number of detected PLA spots across the cell-cycle perfectly overlap the behavior measured for the DDR foci provided by the segmentation of gH2A.X and 53BP1 spots.
