SUPPLEMENTARY MATERIALS

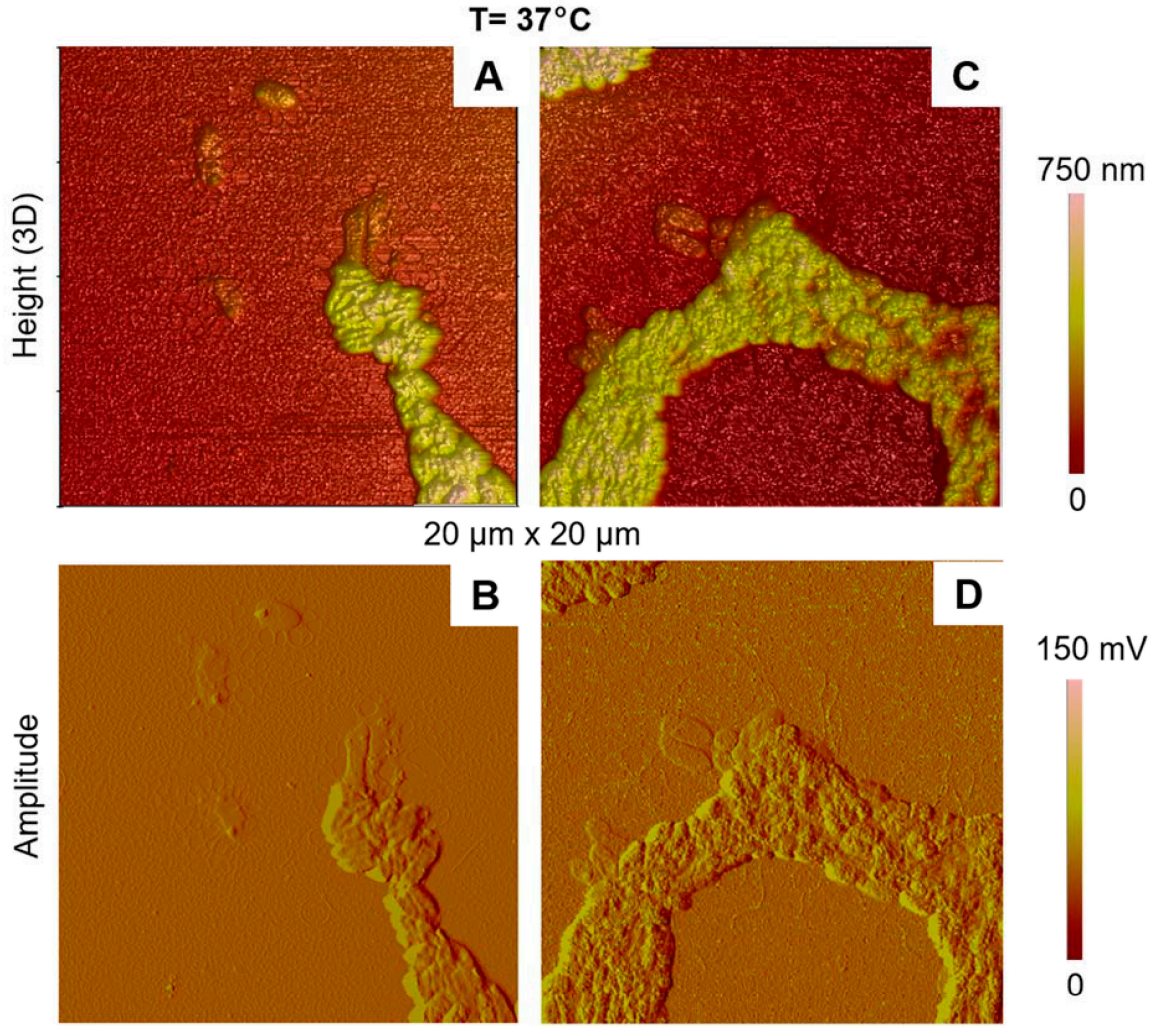

Figure S1. AFM images of *P. fluorescens* bacteria incubated for 15 hours in LB medium at 37 °C. AFM images are 3D height or topographic ones (A, C) and amplitude ones (B, D).

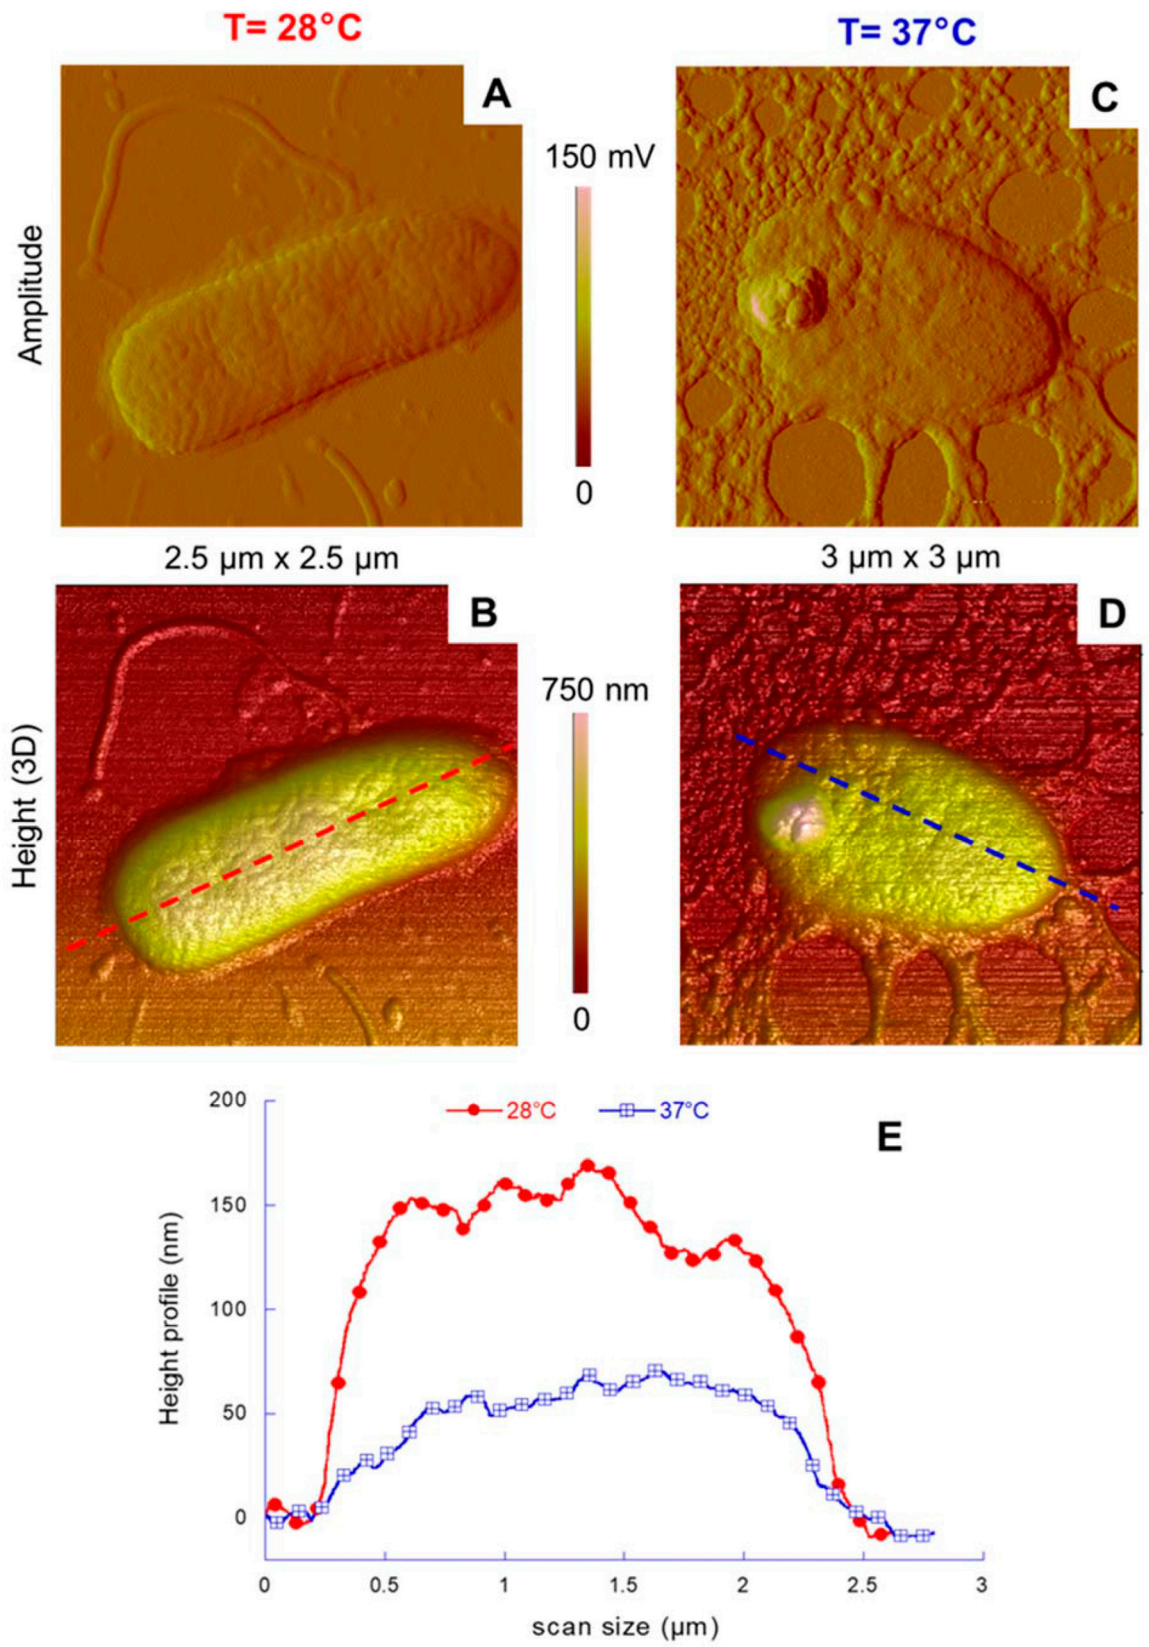

Figure S2. AFM images of *P. fluorescens* bacteria incubated for 15 hours in LB medium at 28 °C (A, B) and 37 °C (C,D) and. AFM images are amplitude ones (A, C) and 3D height or topographic ones (B, D). (E) Height profiles of the two bacteria imaged in (B) and (D).
