

Supplementary Figure S1: ILCs infiltration segregated across various clinicopathological parameters in OSCC patients

Percentages of ILC1, ILC2 and ILC3 are plotted separately against each of the category in various clinicopathological parameters in OSCC patients. X-axis denotes various clinicopathological parameters and Y-axis denotes percentages of ILCs.

M=male, F=female, 1=buccal mucosa, 2=lip, 3=tongue, 4=alveolus, 5=hard palate, Y=yes, N=no, W=well differentiated, M=moderately differentiated, P=poorly differentiate, T1=<2cm, T2=2-4cm, T3=>4cm, T4=>4cm+locally advanced, N0=no lymph node metastasis, N1=single ipsilateral lymph node involved at $\leq 3\text{cm}$, N2=single/multiple ipsilateral, bilateral/contralateral lymph node at 3-6cm, N3= metastasis in lymph node at >6cm in its greatest dimension.
