

## Supplementary Figure S1.

**Figure S1.** Cellular viability data (cell survival) for **a)** experiments with iron compounds at 500  $\mu$ M, 48 hours **b)** COX-2 inhibited cells (Sulindac sulfone at 100  $\mu$ M, 96 hours). Data are means of 3 cell replicates  $\pm$  Sdev. Significant differences from untreated control cells are indicated with an asterisk (\*).
