Supplementary Figure S1. TE relative abundance obtained analyzing 14 bird species. For each species the column on the left represents the values obtained considering chromosome level assembly while the column on the right represents the values obtained considering scaffold level assembly.

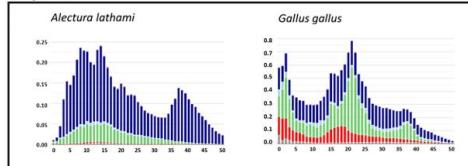

Sphenisciformes

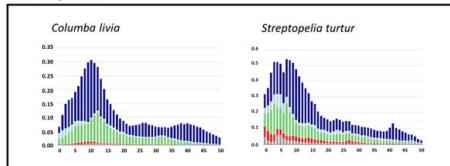

Caprimulgiformes

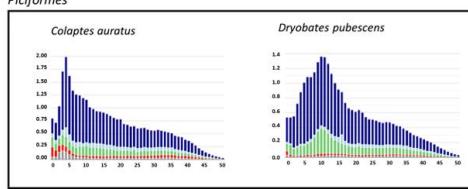

Galliformes

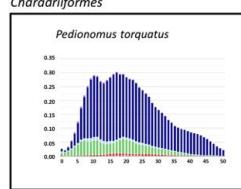

Columbiformes

Piciformes

Charadriiformes

Supplementary Figure S2. TE landscape plots obtained by Kimura distance-based copy divergence analyses of some species belonging to Sphenisciformes, Caprimulgiformes, Galliformes, Columbiformes, Piciformes, and Charadriiformes. X axis: Kimura substitution level (CpG adjusted); Y axis: percent of genome.

Supplementary Table S1. Accession numbers and information regarding the assembly level of genomes belonging to bird species used in this study are reported. For each species the common name is listed in the right column.
