Figure S1

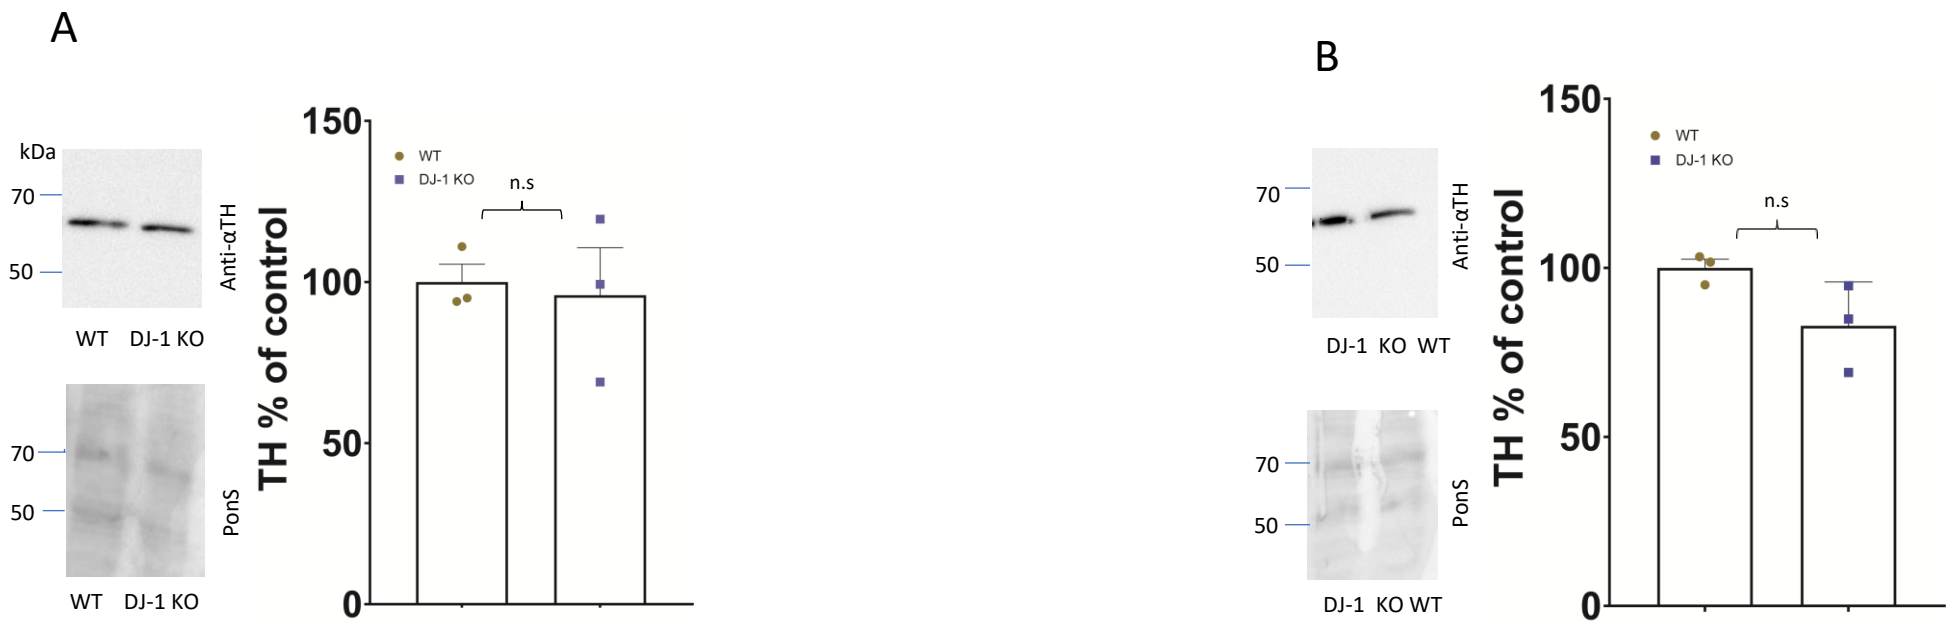

Figure S1. Tyrosine hydroxylase levels are not altered at the early adult stage. Western blots of tyrosine hydroxylase (TH) expression and densitometric quantification from 7 (A) and 10 (B) months of wild type and DJ-1 KO brains. Values are the mean ± SEM (n=3). Expression levels were normalized using PonceauS staining. n.s, non-significant ($p>0.05$) using Student's two-sample t-test.
