

Figure S1. Cell viability (a) and proliferation (b) measurements after treatment with different concentrations of EGF.

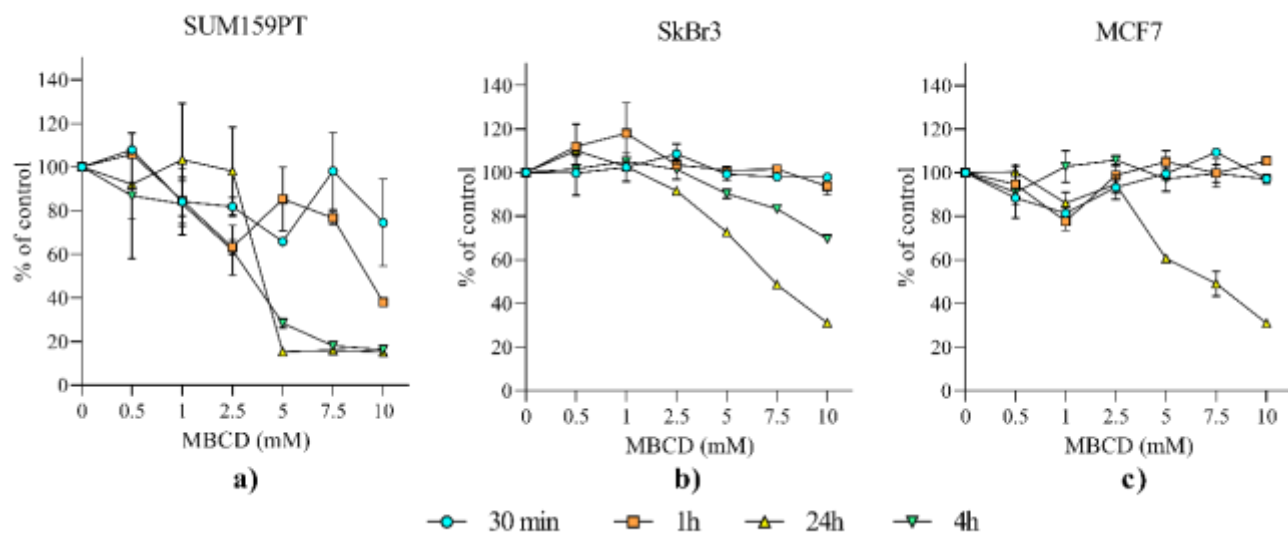

Figure S2. Cell viability measurements on SUM159PT (a), SkBr-3 (b), and MCF7 (c) after treatment with different concentrations of MBCD in different time periods.

Figure S3. Cell proliferation measurements after treatment with different concentrations of MBGD.

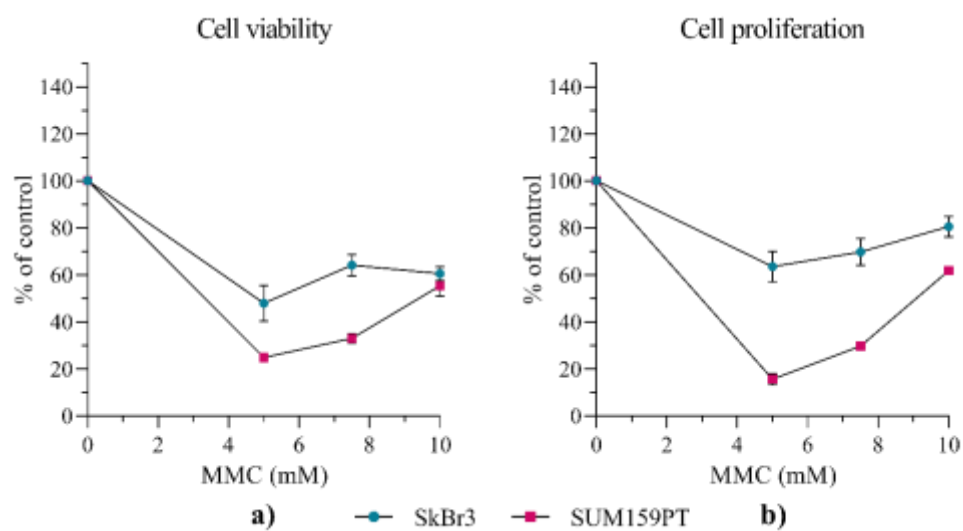

Figure S4. Cell viability (a) and proliferation (b) measurements after treatment with different concentrations of MMC.
