

Supplementary Figure 1. Purkinje cell-related proteins corrected by calbindin levels in 5.5-month-old wild type (WT, n= 11-21) and *Harlequin* (*Hq,* n=10-20) mice. Data (mean, interquartile range, and min and max values) are expressed relative to the WT group. *P*-values for differences between WT and *Hq* groups (Mann-Whitney U test) are shown above the graph.
